NURSING TIMES

YOUR leisure hours should be "pleasure hours" . . . a time to relax and to enjoy a well-earned rest and to refresh your mental and physical energies.

When you come off duty, you will be wise to have a cup of 'Ovaltine'. It is a delicious and refreshing drink. Made from Nature's best foods and fortified with extra vitamins, 'Ovaltine' helps to put new life into you.

'Ovaltine' is the ideal after-duty beverage—it really does you good.

OVALTINE

VITAMIN STANDARDIZATION PER OUNCE: *Vitamin B_1, 0.3 mg.; Vitamin D, 350 i.u.; Niacin, 2 mg.*

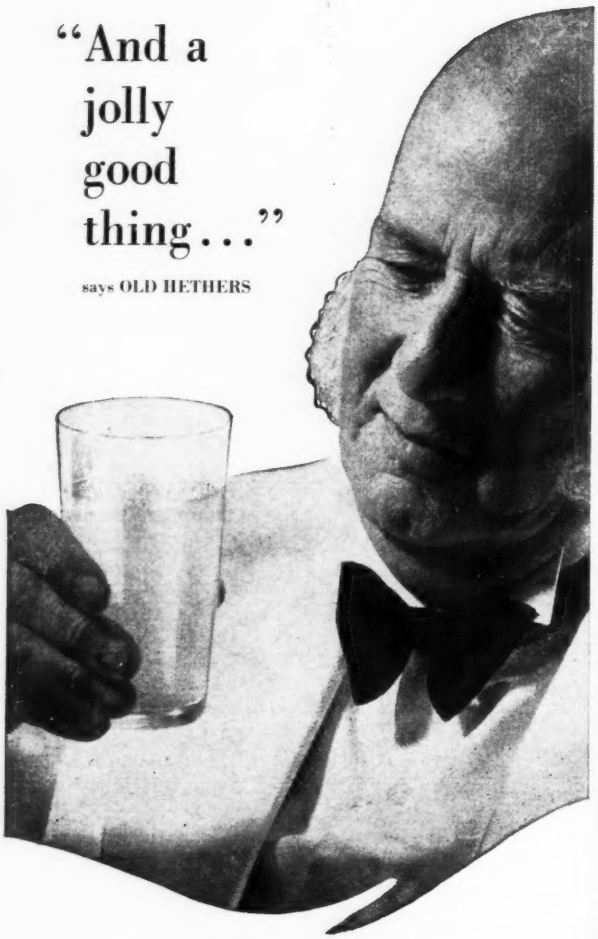
"And a jolly good thing..."

says OLD HETHERS



Making Barley Water isn't what it used to be. And a jolly good thing too, I say! Yet some folk still spend hours stewing and straining pearl barley—the old fashioned way! Take my tip, Nurse. Give pearl barley the go-by and go for Robinson's 'patent' barley—made in a minute. It's cheap too—a 1/7½d. pack makes forty-eight pints.

ROBINSON'S

FLETCHERS'

Disposable Unit

ENEMA

is being used

MORE and MORE

by Hospitals, Midwives and District Nurses for the safe and simple evacuation of the lower bowel. Here are four reasons why they are rapidly superseding old-fashioned methods:

* Ready for instant use
* As easy to administer as a suppository
* No equipment to provide or sterilize
* Cheapest Disposable Enema available

A special feature of FLETCHERS' Enema is the non-traumatic rectal tube.

MENTAL AND MENTAL DEFICIENCY NURSING APPOINTMENTS

REGISTERED NURSE TUTOR

ST. BIRINUS GROUP SCHOOL OF NURSING, MOULSFORD MANOR, MOULSFORD, BERKS.
Male or female. Applicants preferably should be in possession of the Sister Tutor's Diploma, but consideration will be given to applicants who are R.M.N. or R.N.M.D. and S.R.N. trained, who have had practical experience in ward administration. The Training School is a modern school with progressive teaching methods and students are now trained in accordance with the Mental and Mental Deficiency 1957 Syllabus. Detailed applications to the Group Secretary, Fair Mile Hospital, near Wallingford, and should be sent within ten days of the appearance of this advertisement.

HOME SISTERS

ST. JOHN'S HOSPITAL, STONE, Nr. AYLESBURY, BUCKS.
(Psychiatric—865 beds). Responsible for Nurses' Homes, Staff Clinics and supervision of Nurses' health.

DEPUTY WARD SISTERS

ST. JOHN'S HOSPITAL, STONE, Nr. AYLESBURY, BUCKS.
(Psychiatric—865 beds). Forty-four hour week. Shift system in force. Required for expansion.

STAFF NURSES (Male)

BRADWELL GROVE HOSPITAL, BURFORD, OXON.
(Male Mental Defective Patients—266 beds). M.D. trained, but consideration will be given to mental trained nurses. Also staff required to open additional accommodation. Modern staff houses which are under course of erection will be available for these posts. Applications to the Chief Male Nurse.

POST GRADUATE COURSES

ST. JOHN'S HOSPITAL, STONE, Nr. AYLESBURY, BUCKS.
(Psychiatric—865 beds). Limited number of vacancies available for male and female State Registered Nurses wishing to qualify for Mental Nurses' Register. An experimental course of 18 months has been approved and is based on the new syllabus recently published. Details and application forms from Matron/Chief Male Nurse. Applications are also invited from female trained Mental Nurses to participate in an in-service course of training in administration. The course will be of six months' duration with a week's introductory block and a further week for revision at the end of the six months. Tuition by discussion, seminars, and visits will be given during weekly study days.

PUPIL ASSISTANT NURSES

CIRENCESTER MEMORIAL HOSPITAL, GLOS.
(General—68 beds). Male and female for two years practical training.

NEITHROP HOSPITAL, BANBURY, OXON.
Approved Component Training School for Assistant Nurses with Chipping Norton War Memorial Hospital and Moreton-in-Marsh District Hospital. Age of entry 18-40 years.

NEWBURY HOSPITALS COMPONENT TRAINING SCHOOL
Excellent experience in acute general hospital and in geriatric nursing. Apply Matron, Newbury District Hospital.

PEPPARD CHEST HOSPITAL, HENLEY-ON-THAMES, OXON.
(Regional Thoracic Surgical Centre—236 beds). The hospital has recently been approved by the General Nursing Council as an Assistant Nurse Training School. This type of practical training is particularly suitable for nurses who find the theoretical part of General Training difficult. This is a well-equipped attractive hospital with a new Teaching Unit. The hospital is set on the spur of the Chiltern Hills, within easy reach of Reading and other large towns. Applications are invited from suitable male and female pupils between the ages of 18 and 45 years for a very interesting and widely varied two year course of training, which includes the nursing of geriatric cases. Schools commence 1st March and 1st September. Resident or non-resident. A caravan site is available in the hospital grounds.

WALLINGFORD HOSPITALS ASSISTANT NURSE TRAINING SCHOOL
Applications to Matron, St. Mary's Hospital, Wallingford, Berks.

WOKINGHAM HOSPITAL, WOKINGHAM, BERKS.
(Chronic Sick and Maternity—145 beds).

PUBLIC HEALTH VACANCIES—Continued

CITY OF GLOUCESTER
Applications are invited from qualified persons for the following appointments, to commence in September, 1960:

HEALTH VISITORS
Salary and conditions of service will be in accordance with the appropriate Whitley Council recommendations. Car allowance. The appointment is superannuable and the successful applicant will be required to pass a medical examination.

HEALTH VISITORS' TRAINING SCHEME
State Registered Nurses holding at least Part I of the Certificate of the Central Midwives' Board who desire to train as Health Visitors.

The successful candidates will be entered in the Oxford Course for six months commencing September, 1960. Tuition fees and reasonable travelling expenses in connection with clinical work will be paid.

Students receive remuneration at the rate of three-quarters of the minimum salary of a Health Visitor during the first year. Full salary paid during the second year.

Successful candidates will require to undertake to serve the Council for 18 months on completion of the Oxford Course. Special consideration is given to suitable applicants for vacancies on the permanent staff.

Applications, stating age, qualifications and experience, together with the names and addresses of three referees, should be sent to the Medical Officer of Health, Priory House, Friars, Gloucester, as soon as possible.
(403)

HOSPITAL AND OTHER NURSING VACANCIES

Huddersfield Hospital Management Committee

BRADLEY WOOD SANATORIUM, HUDDERSFIELD

Applications are invited for the appointment of **Matron** at the above hospital. The post will be available from the 1st September, 1960.

The hospital has 94 beds for the treatment of tuberculosis, but of these 34 will shortly be adapted for the admission of geriatric patients. The hospital participates in an Assistant Nurse Training Scheme.

The salary scale is £875-£1,025 per annum and is in accordance with the Terms and Conditions of Service of the Whitley Nurses' and Midwives' Council.

Applications, giving full particulars of age, training, qualifications and experience, accompanied by the names and addresses of two referees, should be sent to the undersigned as soon as possible.

H. J. JOHNSON,
Group Secretary.
Huddersfield Hospital Management Committee,
The Royal Infirmary,
Huddersfield. (233)

Blackpool and Fylde Hospital Management Committee

WESHAM PARK HOSPITAL, KIRKHAM

MATRON

Applications are invited for the post of **Matron** at the above hospital which is a Training School for Assistant Nurses. The post will become vacant on the 1st November, 1960, on the retirement of the present Matron. Applicants should be suitably qualified trained nurses with wide administrative experience.

This is a hospital of 320 beds which will be extended in the near future when the non-sick accommodation (168 beds) is taken over and utilised for hospital purposes. The present bed allocation is geriatric—276 and psychiatric—44. The hospital has been considerably up-graded during the last ten years and there is a Treatment and Out-patients' Department for psychiatric patients, and an active rehabilitation (physiotherapy and diversional therapy) department.

Salary scale £1,035 x £40 (5)—£1,235 per annum. Resident charge £285 per annum. A semi-detached house is available within the hospital grounds. The Group Secretary will, upon request, arrange for prospective candidates to visit the hospital.

Applications, giving full details of age, education, training, qualifications and experience and giving the names and addresses of three referees, should be sent to the Group Secretary, Blackpool and Fylde Hospital Management Committee, Victoria Hospital, Blackpool, not later than the 15th July, 1960. (189)

Preston and Chorley Hospital Management Committee

SHAROE GREEN HOSPITAL, PRESTON

APPOINTMENT OF MATRON

Applications are invited for the appointment of **Matron** consequent upon the retirement of the present holder on 30th September, 1960. This hospital is a complete General Training School of 375 beds and is a Part II Midwifery Training School. Extensive developments are shortly to be started which will include additional wards, theatres, etc.

Salary and conditions of service in accordance with Whitley Council recommendations. Present salary scale £1,035 x £40 (5) to £1,235, less £285 per annum residential emoluments.

Forms on which applications must be submitted can be obtained from the undersigned, to whom they must be returned not later than 8th August, 1960.

H. HILL,
Group Secretary.
Royal Infirmary,
Preston, Lancs. (475)

SWINDON GROUP OF HOSPITALS

(550 beds)

Applications are invited for a **Theatre Superintendent** (resident or non-resident) to be responsible for the organisation of the Theatres in Princess Margaret Hospital, Victoria Hospital and St. Margaret's Hospital.

Applications, giving details of age, qualifications, experience, to be sent to the Group Matron, Victoria Hospital, Swindon, Wilts., not later than 23rd July, 1960. (433)

HAVELOCK AND GRINDON HALL HOSPITAL
HYLTON ROAD, SUNDERLAND

Applications are invited from suitably qualified and experienced persons for the post of **Assistant Matron** at the above hospitals, which becomes vacant on 24th August, 1960. Candidates must be S.R.N., R.F.N. and resident—the flat being situated at Grindon Hall Hospital in very attractive grounds. Salary in accordance with Whitley Council regulations.

There are 151 beds at Havelock Hospital, catering for infectious diseases and pulmonary tuberculosis; and 50 orthopaedic beds at Grindon Hall Hospital. The hospitals are recognised by the General Nursing Council as a component training school for nurses and for fever nurse training.

Applications, in writing, naming two referees, should be sent to the Matron, Havelock Hospital, Hylton Road, Sunderland, as soon as possible. (335)

SCARBOROUGH, BRIDLINGTON, MALTON AND WHITBY GROUP HOSPITAL MANAGEMENT COMMITTEE

Applications are invited for the post of **Assistant Matron** to the Lloyd Hospital, Bridlington (Acute—50 beds). The hospital participates in a Group Assistant Nurse Training Scheme. Salary £750 x £30 to £870 per annum.

Applications, stating age, experience, qualifications, etc., together with two names for reference, should be addressed to the **Group Secretary, Scarborough Hospital.** (56)

NEWCASTLE REGIONAL HOSPITAL BOARD

On behalf of the Management Committees, applications are invited for the following appointments, and should be sent, together with details of age, qualifications, training, experience, and the names of two referees (or copies of two recent testimonials) to the Matron of the appropriate hospital (except where otherwise stated) from whom further details may be obtained. Salaries and conditions are in accordance with the appropriate National Agreements.

CLASSIFIED ADVERTISEMENTS—Continued on Page xxix

Patients appreciate

Cuticura Talcum is fresh and fragrant as a spring morning and we know very many nurses who personally will use nothing else. But have you ever thought how much your patients—particularly those bedridden for long periods—would appreciate cooling, soothing, mildly medicated Cuticura Talcum! Sweet-smelling but not over-powering, refreshing Cuticura Talcum makes an ideal accessory for every sickroom. Use its gentle, satiny texture to guard against all soreness and chafing. Use its freshness to keep patients cool and collected through the most trying days.

Cuticura TALCUM . . .

is so kind to sensitive skins at each end of the age scale. It has just the right tender touch for the elderly; and babies—with good reason—adore it.

Mental Health Week

THIS IS Mental Health Week. Last week, by an overwhelming majority, members of the Royal College of Nursing voted to extend membership of the College to all registered nurses, which means that Registered Mental Nurses will soon be welcomed into membership. As a preparation for this Mental Health Year, the College last November convened a mental health conference.

How can we link these three events? We can do it, and take a great stride forward, if each one of us makes an effort to get to know something of modern methods of psychiatric treatment, to visit a mental hospital, to make the personal acquaintance of our colleagues in the mental field and to invite them to a Branch meeting to learn something of the College's activities.

The Mental Health Act, 1959, will come into force in October this year. This will affect each one of us, both in our professional and in our private capacities. Professionally, those of us who are only general-trained nurses must be prepared to nurse patients in our hospitals who may be suffering from mental illness. As citizens (and as potential patients), we must all be prepared to give support in the form of community care.

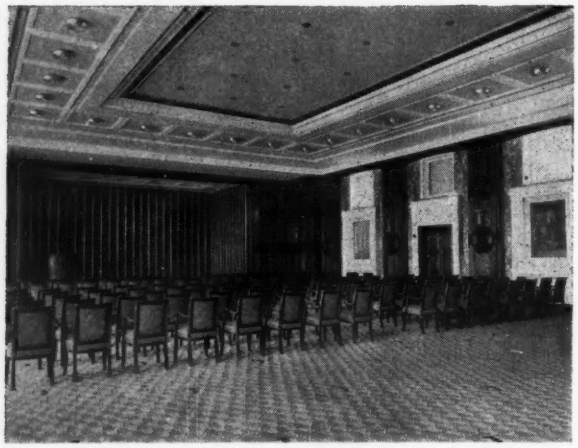
The mass media of press, television and radio have, for months past, been preparing the general public for the changed attitude towards mental sickness. Columns in the newspapers and magazines have been directed towards removing the idea of the stigma of mental illness and have described the silent revolution of the unlocked doors and new drugs. The BBC TV programme *Lifeline* has, for nearly two years, unsensationally and with sympathetic understanding, explained aspects of mental illness to a huge viewing public. And public opinion has shown a remarkable readiness to accept change. Psychosomatic medicine has been discussed from the pulpit and in the coffee bars; that 41 out of 100 beds in the NHS are occupied by people with mental sickness is a statement as likely to be heard on the top of a bus as it is from the conference platform.

From October we, general and mental nurses, as members of the community and of the nursing profession, will have a number of problems in common. A comprehensive health service means a comprehensive nursing service. Mental and general trained nurses have much to learn from each other: let us start the learning process this week.

News and Comment

Amended CMB Rules

CHANGES IN THE RULES of the Central Midwives Board are authorized in a new statutory instrument (1960 No. 1105), effective on July 1. Among these changes is an alteration in the length of the 'lying-in period' now defined as being not less than 10 and not more than 28 days. The distinction between practising as a midwife and acting as a maternity nurse has been removed and in consequence of the change of definition, midwives acting only as maternity nurses as well as other practising midwives will be required to attend compulsory refresher courses. New uniforms for State-certified midwives have been approved by the Board and an illustrated leaflet shows various alternative styles.



The Nuffield Assembly Hall in the new headquarters of the Royal College of Obstetricians and Gynaecologists in Regent's Park, London, which are to be opened by the Queen on Tuesday, July 12.

Nursing Studies Unit

YET ANOTHER academic success has been gained by a member of the Nursing Studies Unit of the University of Edinburgh. Miss K. J. W. Wilson, S.R.N., S.C.M., S.T.D., a part-time lecturer in the Unit, will graduate B.Sc. on July 7 and continue full-time on the staff. Miss Wilson trained at the Edinburgh Royal Infirmary, the Simpson Memorial Pavilion and gained her tutor's diploma at the Royal College of Nursing, Edinburgh. Miss Wilson is co-author with Miss J. Ross, R.G.N., R.F.N., of *Foundations of Nursing;* another book, *Anatomy and Physiology*, is in course of preparation.

The massive new surgical block for Guy's Hospital, London, which is due to be occupied in the late autumn.

Employment of Young Persons

A QUESTIONNAIRE on the employment of young persons in hospitals is being sent to all hospital authorities by the Ministry of Health. This is in response to a request by the National Consultative Council on the Recruitment of Nurses and Midwives, which has been discussing hospital nursing cadet schemes. It was felt that up-to-date information was needed on the employment of young persons in hospitals on nursing duties, and that it should relate to all hospitals, whether or not there is a cadet scheme at the hospital.

Work Study to be Expanded

HM (60) 51 authorizes the appointment of additional work study officers in the hospital service, both by regional hospital boards and boards of governors of teaching hospitals. Additional RHB work study officers will be graded as principal administrative assistant (£1,170-£1,400) or senior administrative grade (£1,000-£1,240) £1,400) or senior administrative grade (£1,000-£1,240), and may be offered training with full pay and expenses. It is suggested that they should be drawn mainly from the hospital service, 'and there would be advantage in selecting officers with different experience, e.g. administrative, financial or nursing.'

Detection of Cancer: New Centre

MANY MEDICAL and other authorities have felt that a gap existed between the work carried out in the cancer research institutions and the treatment given at the hospitals. A step in supplying the missing link will be taken with the formation in London of the first centre of its kind—the Cancer Prevention and Detection Centre. It is to provide a service for early diagnosis

of cancer and for detecting pre-cancerous conditions by means of new techniques based on the modern concept of cancer as an illness of the whole organism and not merely a localized growth. An important function of the new centre will be mass check-ups at factories and offices. In fact, it is hoped that the CPDC will do for cancer what chest clinics and mass radiography have done in the fight against tuberculosis. Funds are required to buy premises and the most modern electronic and other technical equipment and to engage expert staff. Present headquarters of the centre are at 62, Queen Anne Street, London, W.1.

CHSC Report

A COMPREHENSIVE PROGRAMME for the prevention of premature birth and the care of the premature infant is outlined in a report of a special sub-committee of the Central Health Services Council, which is summarized in the Council's report for 1959*. Regional premature baby units are suggested with a staffing ratio of at least two nurses to three babies. The ratio of specially trained nurses to others should be kept as high as possible. Special arrangements also need to be made for the home care of premature infants, states the report, and there should be continuing research into the factors causing premature labour. Two new committees have been set up by the Council, one to deal with problems of operational research into prescribing, and the second to review the scope and methods of health education in the NHS.

**Report of the Central Health Services Council for the year ended 31st December 1959. HMSO. 1s. 6d.*

SUMMER MARKET

Cowdray Hall, Royal College of Nursing, Henrietta Place, Cavendish Square, London, W.1, Thursday July 14, 12 midday—6 p.m. Opening by Wilfred and Mabel Pickles. Proceeds to help send Ward and Departmental Sisters Section delegate to the ICN Congress in Australia.

NURSES AND GRADUATES

THE GENERAL NURSING COUNCIL FOR SCOTLAND has now given approval to an experimental scheme of training proposed by the Nursing Studies Unit of the University of Edinburgh. The course, which will begin in October, is planned to integrate the preparation for an arts or science degree with that of the professional nurse. The M.A. or B.Sc. degree examination will be completed at the end of three years, and the nursing course during the subsequent two years. The main hospitals concerned in this scheme will be the Royal Infirmary, Edinburgh, and the Western General Hospital, Edinburgh. Students undertaking the course will be exempt from the preliminary examination. (See further particulars below.)

UNIVERSITY OF EDINBURGH

Integrated Degree and Nursing Certificate Course

Scheme of Training

Final acceptance of the student will follow a four-week period of planned observation and preliminary experience in a selected hospital before the beginning of the course in October. Exemption from this condition may be granted if the candidate has previous experience of hospital work.

Students will be registered for an arts or science degree in the normal manner, the nature of the course having been decided by the director of nursing studies, in conjunction with the directors of studies in the Faculties of Arts and Science.

During the first three years both the theory and practice of nursing will be introduced, completion of the professional training occurring in the two years after graduation. A wide range of practical experience will be provided in the fields of general medicine and surgery, together with specialties, including psychiatric nursing, paediatrics, obstetrics and public health.

While students will be expected to become an integral part of the normal hospital student body, under the tuition of the established training school, additional supervision and assistance will be provided by the lecturing staff of the Nursing Studies Unit.

Admission

Conditions of entry will be the same as those for any prospective university student, demanding an attestation of fitness certificate; there will also be a preliminary interview.

Owing to the unavoidable delay in advertising the course, consideration for this, the first year, can only be given to prospective *Arts* students. Applications for this year should be made, *without delay*, to the Director of Studies, University of Edinburgh, 19, Chalmers Street, Edinburgh. Interviews will take place during the second and third weeks of August, and the preliminary hospital experience will be arranged for the month of September.

CASE STUDY

Chronic Bronchitis, Emphysema and Cor Pulmonale

R. M. A. HANNA, Student Nurse, Royal Victoria Hospital, Belfast

Bronchitis is sometimes thought of as a not very serious winter complaint. In this account, which won second prize in our Case Study Competition, Miss Hanna describes the nursing care and treatment of a patient who was very ill indeed after a bronchitic attack complicated by cor pulmonale and emphysema.

MR. S. was admitted to a medical ward as an emergency on March 22. He was 49 years old but seemed much older. Illness had obviously played a large part in his life. He was very cyanosed and dyspnoeic. His pulse rate was 84 beats a minute, blood pressure 145/95, and temperature 99°F. Aminophylline, 20 ml. intravenously, was given immediately and intermittent oxygen administered.

Our suspicion of previous chest trouble was confirmed by his wife who stated that he had been admitted for a month each in the previous spring and autumn with an acute exacerbation of his chronic bronchitis. During the past eighteen months, his activities had been greatly reduced by his persistent ill health.

On examination he was found to be very drowsy and a flapping tremor of his upper limbs was very obvious. No finger clubbing was present. He had a chronic cough and expectorated a little thick, yellow bloodstained sputum. He was sweating profusely.

During the remainder of the day he remained very drowsy and showed little interest in his surroundings. He was made as comfortable as possible in the orthopnoeic position in an attempt to ease his breathing.

Deterioration—and Tracheotomy

March 23. Mr. S's condition had deteriorated considerably—he was now semi-comatose. It was decided that a tracheotomy should be performed immediately for respiratory failure.

On his return to the ward, Mr. S. was received into a warm bed in the side ward and strict barrier nursing was enforced. The room had previously been washed down with carbolic 1 : 20 and fine ventilator gauze covered the air inlet—the plenum system of ventilation is used in this hospital. Disposable paper masks and white gowns were used by all attending the patient, including his wife, who was allowed in for a few moments. Suction apparatus was placed beside the bed and the rubber catheters used were placed in a bowl of Hibitane 1 : 250 solution. Each catheter was used only once, rinsed and then placed in a second bowl of Hibitane for re-sterilization. Before and after suction the nurse scrubbed her hands and applied Hibitane cream. The room itself was sprayed periodically with Hibitane 1 : 250.

A cuffed rubber tracheotomy tube had been inserted and this was easily connected to the Beaver respirator, oxygen being administered continuously. However, Mr. S. struggled very violently against the machine. Intravenous fluids were started at 3.30 p.m.—one litre of 5% dextrose to every 500 ml. normal saline and hydrocortisone, 500 mg., were added to each 500 ml. of fluid.

Intense bronchospasm prevented adequate ventilation and the patient failed to respond to intravenous aminophylline, 10 ml., and adrenaline, 1 ml., in 20 ml. normal saline. During the remainder of the day he was very restless and required sedation with intramuscular pethidine, 50 mg., at 6.15 p.m. He was incontinent on two occasions. Chemotherapy was started—intramuscular terramycin, 100 mg. six-hourly, and intravenous chloramphenicol, g. 1, at 6 p.m. Observations of pulse, blood pressure and respiration rate were taken each quarter hour with four-hourly temperature readings. Postural drainage was instituted by the physiotherapist, with half-hourly changes of position. In her absence this was supervised by the nurse. Care was taken to relieve pressure on all bony prominences and disposable underpads proved very useful while the patient was incontinent. Mouth toilet and tepid sponging were carried out four-hourly.

Continuous Oxygen

March 24. The next day Mr. S. seemed a little improved but he required pethidine, 50 mg., at 4.45 a.m. He was removed from the Beaver respirator and continuous oxygen was administered via a polythene mask over his tracheotomy tube. While he was breathing unaided the cuff of the tracheotomy tube was deflated to prevent injury to the trachea by the constant pressure. The generalized twitching still continued. Intense bronchospasm remained, and intravenous Xylocaine had no effect on it. Sponging was still performed as his temperature remained at 99°F. Mr. S. began to take oral fluids and his intake in 24 hours was 300 ml. intravenously and 570 ml. orally; output was 530 ml. plus incontinence.

On March 25, a report from the laboratory stated

that Staphylococcus aureus was present in cultures from Mr. S's trachea. Intramuscular chloramphenicol and terramycin were discontinued and novobiocin, 250 mg., and chloramphenicol, 250 mg., orally three times a day, were started to combat the infection.

Prednisone, 10 mg. thrice daily, was also given. Mr. S. was still twitching and seemed very confused mentally. The Beaver respirator was again used and after two-and-a-half hours of assisted respiration, his blood pressure fell to 90/60. He was allowed to breathe unaided and his blood pressure rapidly rose to 130/90. For the remainder of the day he was given short periods of assisted respiration with oxygen via the mask. The intravenous fluids were continued, 20 ml. nikethamide being added to each 500 ml. of fluid.

Restless, Worried and Anxious

The strain of this period seemed to be telling very much on his wife. Her vain attempts to rouse him proved hopeless and her endless questions about his condition to the nurses did not ease the situation. Just how much of his surroundings the patient could understand was difficult to ascertain but from his restlessness and worried expression he seemed very aware of his critical condition.

The next day Mr. S's temperature dropped to normal but his general condition remained unchanged. His respiration was assisted for five minutes in every half-hour. The prednisone was discontinued and replaced by ACTH, 50 mg. twice a day. Intravenous fluids were discontinued and intramuscular nikethamide, 4 ml., was ordered three-hourly until 10 a.m. the following day. He was taking oral fluids well and had learned to communicate by nodding his head for 'yes' or 'no' when asked a direct question. The reason for his loss of speech was explained to him and he seemed perfectly content. When the nurse covered his tracheotomy tube he seemed only able to grunt but this satisfied him that his loss of speech was not permanent.

About this time a small blister appeared on Mr. S's left heel owing to pressure. Great care was taken to see that no more pressure was exerted on the area and it soon healed completely.

The next day he managed to eat some semi-solid food such as scrambled egg and milk pudding and this gave him great encouragement.

During his visit to the National Hospital, Queen Square, Centenary Celebrations the Duke of Edinburgh showed keen interest in the respirator designed by Dr. R. A. Beaver, the consultant anaesthetist, who demonstrated and explained it to the Duke.

Incontinent and Delirious

March 29. All assisted respiration was discontinued and Mr. S. was not to be returned to the machine unless there were signs of respiratory failure. His colour and breathing remained good. However, he was still incontinent of urine and mentally confused at times. The twitching still remained and he did not seem to be making much progress. That evening he was disorientated and even tried to get out of bed. He seemed very anxious and excitable.

March 30. During the early morning Mr. S. remained delirious. Largactil, 50 mg. was given intramuscularly at 12 midnight and combined with Phenergan, 50 mg., at 2 a.m. with little effect. At 6 a.m. pethidine, 50 mg., was given intramuscularly and the patient settled down. Until midday Mr. S. remained delirious. Assisted respiration was enforced for a little while but little change was seen. The oxygen was turned off for 10 minutes but his colour did not remain good. His condition continued to deteriorate and assisted respiration by the Beaver respirator was discontinued. He remained very restless, his eyes glazed and his limbs twitching. Intravenous pethidine, 50 mg., was given at 2.40 p.m. and intravenous Phenergan, 25 mg., with intramuscular Phenergan, 25 mg., at 3.30 p.m. with some effect. His wife was with him during this time but he did not seem to know her or respond to her voice.

The next day, Mr. S. remained restless and pethidine, 50 mg., and Phenergan, 25 mg., were given intramuscularly with good effect. At 2 p.m. he became very drowsy and did not respond to painful stimuli. Assisted respiration was started with some degree of improvement. Aminophylline, 10 ml., and nikethamide, 4 ml., were given intravenously. His mental state improved slightly during the night.

Retention of Urine

April 1. Now another serious complication showed itself. Mr. S. had not passed urine during the preceding 24 hours and his bladder was not distended. Renal

NURSING TIMES Reprints . . .

Psychology Applied to Nursing and *Nursing Emotionally Disturbed Patients*, by Doreen Weddell, S.R.N., S.C.M., 2s. 3d. each (by post 2s. 7d. each) . . . may be obtained from the Manager, *Nursing Times*, Macmillan and Co. Ltd., St. Martin's Street, London, W.C.2.

failure was immediately diagnosed and a restricted fluid regime of 500 ml. plus the equivalent of his output was instituted (300 g. of lactose were put in every 500 ml. water). During the next 24 hours he passed 360 ml. of very concentrated urine. His output continued to improve until seven days later he was back on a normal fluid intake.

His condition continued to improve during the next few days and frequent short visits from his wife and his son did much to encourage him. His electrolyte balance was maintained and he was breathing unassisted for longer periods with continuous oxygen.

April 4. Mr. S. was removed from the respirator completely. His colour remained good for 10-15 minutes without oxygen and his mental condition was normal. He became interested in outside things and questioned his wife about happenings at home. He learnt to cover his tracheotomy tube with his own finger and found conversation easier each day.

April 12. Mr. S's bed was moved into the main ward. At first his return to the noisy and busy environment seemed to have a rather shattering effect but he soon settled down. Barrier nursing ceased and the pleasure that he got from being treated more like a normal person was obvious.

Two days later Mr. S. was allowed up for the first time. This was the moment he had been waiting for but his own weakness amazed him. He seemed very depressed but a little encouragement from the nurses helped him considerably.

April 17. By now Mr. S. was up and about and walking around the ward. He soon made friends among the patients, many of whom shared his own interests in sport. While he was up a little cork was placed in his tracheotomy tube and he found no difficulty in breathing normally, and naturally his speech was much easier.

Four days later Mr. S. was told that if his condition remained satisfactory his tracheotomy tube would be removed in a few days. Although he did not say anything, one could feel that he was apprehensive about this seemingly 'major operation'. However, reassurance from the nurses again eased the situation and, when the time came, he was amazed at the simplicity of the procedure.

Mr. S. is still in hospital awaiting discharge. He is up and about and always smiling. Although his bronchospasm still remains he keeps a good colour and all twitching in his limbs has gone. His recovery certainly is remarkable.

Summary

Mr. S. entered hospital with an acute exacerbation of his chronic bronchitis, emphysema and cor pulmonale. Adequate respiration was maintained by use of the Beaver respirator and continuous oxygen for 13 days. His tracheotomy tube was removed after a further 16 days. Although his bronchospasm still remains, his breathing is not distressed and his colour is good.

[I would like to express my thanks to Miss F. E. Elliott, matron, and to Professor O. L. Wade, M.A., M.D., M.R.C.P., for permission to submit this case study.]

Royal College of Midwives Annual General Meeting

At the opening of her address at the annual general meeting of the Royal College of Midwives on June 16 the retiring president, Miss M. Williams, paid tribute to the support, friendship and active interest in the College over many years of Mr. C. S. B. Wentworth-Stanley. He had been a great driving force behind the appeal for funds for the new building; it had been at his suggestion that a successful application had been made for a Grant of Arms.

It was gratifying that some action had been taken on the Cranbrook report, said the president. Of interest to the board was the alteration of the definition of the lying-in period, which was now 10 days minimum (with maximum of 28 days) during which the continued attendance of a midwife was required. It had been suggested that the definition of a practising midwife should be amended so as to resolve the controversy about the title 'maternity nurse'. It was hoped that a statutory instrument would embody such changes.

A new memorandum had been prepared by the CMB stating their views on the position of the head midwife. Negotiations were still proceeding on obstetric training for student nurses. Revision of the training of pupil midwives would necessarily follow this when established.

Reference was made to the successful course on 'Human Relationships in the Care of Mother and Baby' held at Oxford recently, which had resulted in a wider recognition of the need for study of human relationships in general, and a suggestion that this subject should be included in the pupil midwife's training. Recent criticisms in the press (while concentrating on unfortunate experiences to the exclusion of the multitude of happy, safely-delivered and contented women among their patients) should prompt a certain amount of heart-searching among midwives. It should stimulate ability to see others' points of view and the realization of changed patterns of modern living, the need for flexibility in thinking and a readiness to accept inevitable change. As Dr. Kershaw, convenor of the conference had said, 'Today the question of how people live has become as important as why people die.'

NURSE TRAINING

Pre-planned Courses

SHEILA KERR SMITH, Assistant Matron, and
ISABEL E. P. MENZIES, M.A., King's College Hospital, London

The allocation of student nurses to wards and departments has to be carried out with due consideration for their training needs as well as the needs of nursing service. A scheme is described at King's College Hospital which attempts to pre-plan courses to give students all-round experience and at the same time staff the wards adequately.

UNTIL THREE YEARS AGO, student nurses at King's College Hospital were allocated individually to practical training, taking into account as well as possible each nurse's training needs and the prescribed establishment of wards and departments. This method emphasized the conflict inherent in the student nurse's role in the hospital—she is a student and she is a practising nurse within the limits of her training.

In 1957 Miss Eastaugh*, then first assistant matron and responsible for the allocation of student nurses to practical work, felt that the existing system was no longer practicable and approached the matron, Miss Opie, about the development of a new method. Miss Opie asked the Tavistock Institute of Human Relations for help in this task, and the Institute started work with a survey to find out more about the nature of the problem and its impact on students and staff. The standard training programme described here is one of a number of changes introduced by the senior nursing staff and the Tavistock Institute as a result of this study.

The standard training programme has as general objectives:

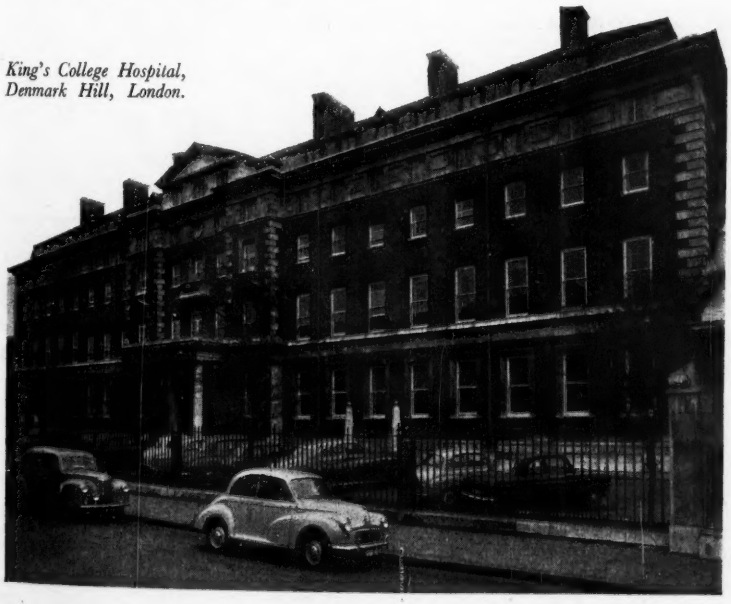
(*a*) to help reduce the excessive movement of student nurses between practical duties, a situation which tends to arise out of the need to keep wards and departments adequately staffed;

(*b*) to reduce the work and strain in matron's office arising from the system of daily and weekly allocation, and having to plan individually for each student.

The programme sets out in detail the course of training for each student nurse from her entry until she completes three years and three months of her training. In the fourth year the nurse fits in such experience as she and the hospital require.

This implies that a set of x different courses must be prepared where x is the anticipated average number admitted to the preliminary training school. At present the anticipated average is 31 students four times a year. Supplementary courses may be planned to deal with any set which is above average in numbers.

Before planning the individual courses it was necessary to make allowances for wastage of students which cuts down the number of courses actually in operation. Estimates of expected wastage were based on wastage rates for the past four years.



King's College Hospital, Denmark Hill, London.

Criteria for the Courses

Courses must separately provide adequate theoretical and practical training for the students, and jointly ensure that the hospital is adequately staffed. The 31 courses are repeated at three-monthly intervals as each new set enters the hospital. The programme cannot be repeated identically, because of the timing of the preliminary training school dates of entry, but it is repeated as nearly as possible.

**Now matron of Swindon Group Hospitals.*

Basic standards laid down by the General Nursing Council are that students must have practical experience in medical, surgical, gynaecological, paediatric and theatre or outpatient and casualty work arranged in such a way that experience is gained in the nursing of men, women and children.

At King's College Hospital the student nurse has three periods of theoretical training in her first three years: 11 weeks in the PTS; six weeks in second-year school; six weeks in third-year school.

Staffing Establishments

Staffing points to be considered are set by the nursing establishment of the hospital. The establishment, however, does not lay down the proportion of nurses of different seniority, and it is desirable in preparing the standard training programme to ensure that a fair balance is maintained in each ward or department between nurses of different seniority. Accordingly the object is to construct a programme which, when repeated almost exactly with every new set, will meet the staffing requirements of the hospital.

So that the training programme may be interrupted as little as possible, a pool of relief nurses is required able to cover any temporary staff shortage due to a heavy work load or sickness. Relief nurses are drawn from the second, third or fourth years of training and work two weeks at a time. Relief nurses are organized by matron's office staff who co-ordinate requests for additional help from wards and departments.

Preparing the Programme

The standard training programme can most easily be prepared on a sheet of squared paper. Since the sets of students enter the Preliminary Training School at intervals throughout the year, it is necessary to differentiate clearly between the weeks of the calendar year and the weeks of the training year.

For this purpose the squares are numbered across the top as follows: blue ink Nos. 1-52 indicate weeks of the calendar year; red ink Nos. 1-52 indicate weeks of training; perpendiculat yellow lines indicate the end of each year of training. Down the side of the page the squares are numbered 1-38 to represent the courses (1-31 being standard courses).

Certain periods are laid down in advance and it is helpful to enter these first on the chart—holidays and study blocks.

Filling in the Details

After the preliminary training school the students spend six weeks only in their first trial ward. Thereafter they go to a second ward. As far as possible one should be a men's ward and one a women's ward. The second spell of duty lasts from 8 to 12 weeks, and leads on to the first spell of night duty. It is important to plan for the whole set to go on night duty together. Thereafter, exact duration of spells in one ward or department will depend on the points at which they are interrupted by other fixed events, but the aim continues to be 10-12 weeks, except for gynaecological experience which is 6-8 weeks (after the first year).

There remains now the detail of the courses, filling in week by week for each course the appropriate practical experience. The wards and departments were given code letters instead of names, to save time and space in making entries. To distinguish night duty from day duty the letter N is added over the code letter for the ward—for example, A^N.

Fig. 2. Chart for Checking Training Programmes against Establishment of Individual Wards

Checking Courses against Establishment

Once the courses are complete they must be checked against the ward establishment. This is done by compiling a chart showing the detail of nurses in each ward for 52 weeks in each of three years. (Fig. 2 shows section of chart.) It is then possible to compare the paper establishment with the actual disposition of nurses week by week, and to consider what adjustments can be made to bring theory and reality into line. In some cases a ward will be under- or over-staffed for only a week or two because of the way the courses fall. Discrepancies may be met from the pool or in other ways without changing the course; a major discrepancy has to be met by reorganization of courses.

Allocating Courses—and Re-allocating

A course is allocated to each student nurse, and she will normally follow that course throughout her training. The need for re-allocating students may arise from two sources. (*a*) When a decision has been made as to which students will take the comprehensive general and children's training in four years; two students only from each set are selected to do the combined course, and they must spend three months in each of the first and second years at the Belgrave Hospital for Children —correspondingly, they should not spend their trial period in a children's ward. (*b*) When it is known how many and which students 'waste'.

Apart from re-allocation problems, it is anticipated that the actual placing of nurses can be done simply by reference to the chart. In effect, this makes it possible to give nurses longer notice of moves and reduces the work in matron's office.

Allocation and re-allocation problems do, however, mean it is not possible to outline a nurse's course to her at the beginning of her training, the Utopian ideal of all planners. However, the nurse can be told, subject to her sick leave remaining within normal limits, when her periods in the study block, on night duty and on holiday will occur.

Comments and Conclusion

The construction of this training programme has clearly thrown up problems of which we have always been aware, and produced statistical evidence of their existence. For example, the hospital is short of certain kinds of experience for student nurses and has an excess of others.

From the administrator's point of view, this plan has helped considerably to make the allocation of student nurses run more smoothly. For example, nurses were often on night duty for the Preliminary or Final State Examinations, but now this does not occur.

Comments from the student nurses show that fixed holidays caused the most concern, but all were agreed that this plan of training helped to keep the sets more closely integrated.

[We should like to extend our most grateful thanks to Miss Eastaugh from whose suggestion the plan originated, to Miss O. V. Bridgeman of the Tavistock Institute of Human Relations who did most of the detailed trial statistical work on this plan, to Miss Opie for her help and encouragement, and to all nursing colleagues, past and present, who help to keep the plan going.]

TALKING POINT

I REALLY FEEL that we must make up our minds what image we want to strike in the public eye. Do we want to be professional women with our academic retinue of research workers and so forth; do we want to be angels of mercy—or are we to appear as 'less than domestic servants' to use the—by now—notorious phrase? (Personally I would like to take up the cudgels on behalf of those excellent women, domestic servants, but that is another matter.)

In the midst of the College annual meetings the other day I saw strolling along Regent Street, amidst the traffic and the tourists, a nurse in indoor uniform sucking an ice-cream, and I thought to myself how difficult it must be for the public to make up its mind as to whether we are fish, flesh, fowl or good red herring.

I am not one for professionalism myself. It seems to me that nursing has its own dignity if only individuals will be prepared to uphold it. But I do not feel that either professionalism or dignity is upheld by the public consumption of ice-cream in the streets, if one is bearing all the outward signs of a nurse. Most of us learn, only too quickly, that once we have left our training schools we lose our identity as Nurses Smith, Brown and Jones and become representatives of our own hospitals. In the same way, the general public are not concerned with Nurse Smith, they are merely concerned with A Nurse. And as she acts and behaves, so will they judge us all.

All the demands in the world for status and salaries will not really alter how we come to be regarded by the public—and it is the public, oddly enough, whom we serve. Licking ice-creams in the street, whatever our private mode of behaviour, is hardly helpful to the profession.

If we spend all our time discussing how much we should be paid and how many hours we ought to work, the public can hardly be blamed if they think we are just another pressure-group of workers. And if these conditions of work in actual fact do become of greater importance to us than the work itself—then, I'm afraid we're lost.

Most of us are, after all, extraordinarily lucky. Nursing in all its aspects, whether at the centre by the patient's bedside or at the periphery, is singularly devoid of monotony—provided you are interested in human beings and what makes them tick. And even the most cynical can hardly deny that nursing is work infinitely worth doing. So why, then, be ashamed of it and anxious to invest it with false academic values and status?

I always feel that poor old Sarah Gamp and her colleagues were much maligned women. The extraordinary thing is not that many of them were drunk when they were working, but that they were working at all in hospitals where pain and squalor and callousness were the order of the day. It is fairly easy to nurse nice, kind, grateful patients in nice, clean, tidy beds with lots of equipment. It is much more difficult to nurse them when they are ungrateful, resentful, fearful and abusive; when the equipment is inadequate and the environment filthy.

Well, we seem to have come a long way from the ice-cream; perhaps what I really mean to say is that it all depends on how we regard ourselves.

WRANGLER.

International Council of Nurses News

SURELY NO ONE has ever equalled Miss Nightingale as a prodigious letter-writer! Mr. W. J. Bishop, the expert who is preparing a bibliography of her letters on behalf of the International Council of Nurses, is working on approximately 15,000 of these which have been traced and catalogued. The sifting, editing and indexing is a tremendous task made more complex by the fact that many of Miss Nightingale's correspondents changed their style and title over the years owing to military promotions, the acquisition sometimes of a knighthood and later perhaps a peerage. Some of the viceroys and statesmen with whom Florence Nightingale corresponded changed their titles and office several times. The work has already taken almost five years and when completed will probably prove to be the largest known collection of letters of any one individual.

The ICN News Letter which gives this report of progress on an interesting project also welcomes the appointment of Miss M. L. Wenger (former editor of the *Nursing Times*) as editor of the *International Nursing Review*, and in that capacity now a member of the ICN headquarters staff in London. It is pointed out that Miss Wenger has already served as press officer and editorial consultant to the ICN on behalf of the National Council of Nurses and has always had close contact with the editorial and public relations department of the ICN.

Already ICN headquarters in London has received 500 requests for application forms for attendance at the Congress in Melbourne next year. Countries nearer to Australia will be applying for these forms to the Melbourne headquarters of the Royal Australian Nursing Federation. Once again participants are reminded that forms and registration fees should reach the headquarters of their own national nurses' association in time for despatch to Australia by November 1, 1960.

UROLOGICAL NURSING

The Gibbon Catheter

A Report on a New Type Catheter

WILLIAM McWILLIAMS, S.R.N., Staff Nurse,
Regional Paraplegic Centre, Promenade Hospital, Southport, Lancs.

A new catheter is described which represents an attempt to overcome the problems of irrigation so often associated with long-term drainage of the bladder. It is made of polyvinyl chloride and may be sterilized by boiling or autoclaving.

LONG-TERM DRAINAGE of the bladder has always presented the problems of urethritis, peri-urethral abscess, epididymitis, cystitis, ascending infections of the urinary tract and the formation of calculi. It was in an effort to overcome these hazards that experiments were begun with fine, polythene catheter tubes, which were home-made from Allen and Hanbury's Sterivac tubing, having an external diameter of 2.5 mm. and a length of five feet. The home-made catheters proved to be most successful; drainage in a fresh, uninfected case of paraplegia could be maintained for many weeks without clinical infection, and the tubing required little attention.

There were, however, certain disadvantages: the tubing was rather hard, and there was a danger of the tip breaking off in the bladder. The co-operation of Dr. S. A. Leader, of Portland Plastics Ltd., was invited, and a standard Gibbon catheter was devised (Fig. 1). The catheter is five feet long, with two soft wings cemented 12 in. from the tip, which is rounded and carries three side holes. The distal end of the catheter is fitted with a graduated adaptor which fits the inlet of a Lane's bottle and most bladder syringes. When the catheter is in position approximately four inches lie within the bladder, and this is one of the most important features as it prevents the tip from pressing against and irritating the bladder mucosa. The catheter is manufactured from polyvinyl chloride, which, although it has the advantage of being softer than the original polythene tubing, is still firm enough to negotiate the urethra. The catheters are virtually non-toxic, and are supplied in all sizes from 4 French gauge to 12 French gauge. The sizes normally used are the 6 French gauge and occasionally the 9 French gauge.

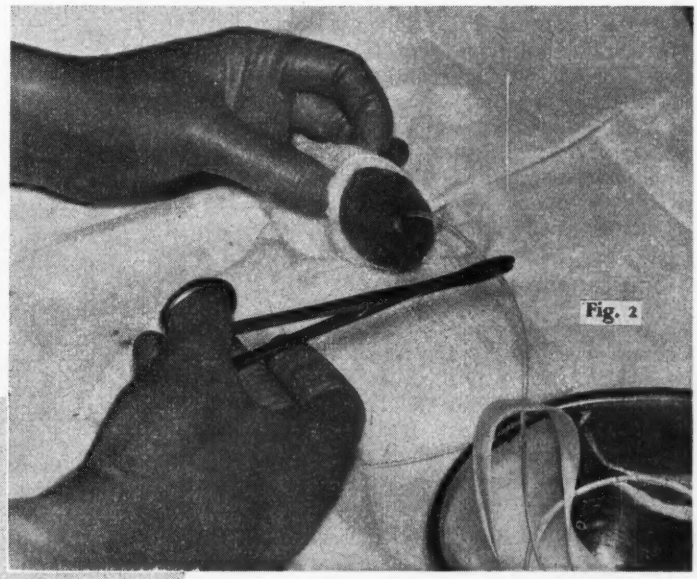

Fig. 2

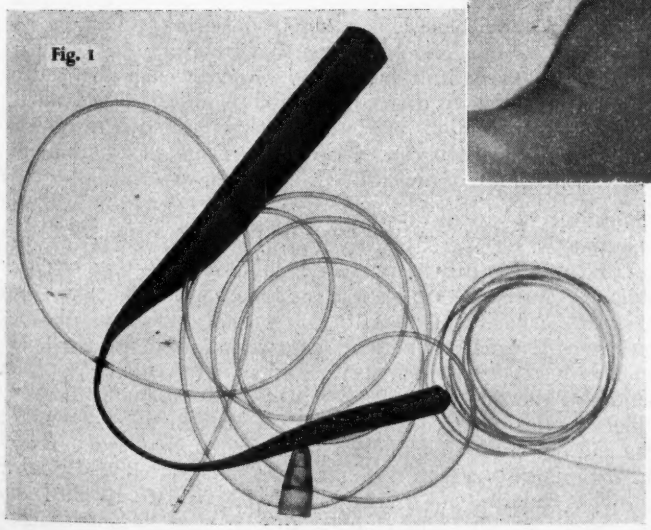

Fig. 1

Sterilization of the Catheter

The catheter may be sterilized by boiling or by autoclaving. For boiling, the stilette is removed, the catheter coiled up and lightly tied

with a length of thread, and filled with water with a syringe. When removing the hot catheter from the sterilizer it should be lifted by the thread, and care should be taken not to crush the walls. The catheter may be autoclaved at normal dressing pressures, but loose packing should be used and the stilette should be left in position as at high temperatures the polyvinyl chloride tends to lose its shape.

Introduction Technique

At this centre all catheterizations are carried out in a separate 'bladder room' under full theatre conditions. The patient's pubic area is carefully washed with soap and water and shaved; the entire area is then cleaned with a skin antiseptic and towelled. A piece of gauze soaked in antiseptic is wrapped around the shaft of the penis, and the glans and external meatus are swabbed again with antiseptic. The catheter may be introduced with the stilette in position, but it is preferably removed first. Where a firmer instrument is desired, and the stilette is left in position for passage, it should first be loosened by gripping the catheter at the level of the wings and while holding it straight withdrawing the stilette half an inch: some difficulty may otherwise be experienced in removing the stilette once the catheter is in the bladder. The catheter is lubricated with a water-soluble lubricant, and it is introduced with forceps (Fig. 2). The penis and the pubic area are then thoroughly dried, and the catheter is secured with one-inch elastic adhesive strapping, lightly applied. It will be seen from Fig. 3 that the ends of the wings of the catheter are strapped to the abdomen; this method avoids the danger of a pressure sore forming at the sharp angle between the penis and the scrotum.

Modifications of the Catheter

At the present time there are two modifications to the basic catheter, both of which have been devised by Mr. A. Walsh, F.R.C.S.I., of Jervis Street Hospital, Dublin. Fig. 4 shows the first modification, an 18 French gauge catheter, five feet long, which has a whistle tip with two side holes. The wings may be adjusted to any position on the catheter. The catheter is, I believe, intended for post-operative urethral drainage, but it has not been used here for this purpose; instead it has been employed for long-term supra-pubic drainage where a tract has already been established. Used in this way it has been most satisfactory; the wings can be adjusted to suit the depth of the tract, and the nature of the material has greatly reduced the irritation and discharge usually associated with supra-pubic drainage.

When introducing the catheter the depth of the tract should be determined beforehand, and the wings set at the appropriate distance from the tip. The lubricated catheter is passed down the tract, and the surrounding area is then dried. A small circle of gauze is placed around the orifice of the fistula, and the wings are laid across the abdomen in a line parallel to the pubis. Two strips of elastic adhesive strapping are affixed to the skin and brought up to encircle the catheter, and finally a length of four-inch elastic adhesive strapping is stretched across the abdomen securing the wings and the two strips of strapping which hold the catheter at the correct depth.

The second modification (Fig. 5) is again an 18 French gauge catheter, five feet long, with a whistle tip and two side holes; but on this catheter the wings are fixed at 12 in. from the tip, and an inlet tube has been cemented to the outside for a distance of 14 in. from the tip. The inlet tube, which has a diameter of 2 mm. and a bore of 1 mm., is the same length as the catheter, and is fitted at the distal end with a luer adaptor which fits the adaptor of a giving-set. The catheter is used for irrigation of the bladder following surgery, and it has the advantage of being much less irritant than the conventional two-way catheter, and lends itself more readily to an aseptic technique for bladder washouts should these become necessary.

Care of the Catheter while in Position

To keep to a minimum the danger of cross-infection the catheter is not changed at regular intervals, but is left in position for as long as it is effectively draining the bladder. It is, of course, inevitable that the catheter will eventually become blocked, and it is most important to recognize when this has happened and to insert a fresh catheter before the bladder becomes distended. Left unattended, the catheter will gradually become blocked with mucus and by the formation of deposits on the inner walls. This can be prevented to a great extent if at regular intervals the catheter is vigorously shaken and knocked against some hard object, such as the rail of the patient's bed. When filled with fluid the 6 French gauge catheter contains approximately 3 ml., and vigorous shaking has the effect of sharply forcing small quantities of urine in and out of the holes at the tip and so keeping them clear, while knocking the catheter dislodges any particles before they harden on to the walls.

A catheter treated in this way as a matter of routine can be kept in position for periods of up to three weeks without blockage or any obvious urinary infection. The strapping should be changed from time to time, particularly if it has become wet through the patient washing, as there is a possibility of it shrinking. Should there be any urethral discharge, which is rare, toilet of the glans can be carried out without disturbing the position of the catheter.

A Form of Tidal Drainage

Recently a polyvinyl chloride collecting bag was introduced to replace the Lane's bottle. The bag has a capacity of 20 oz., and was introduced for its convenience; a patient who was up and about all day could strap it to his leg, and at night could hang it from the side of the bed (Fig. 6). It was found, however, during the prototype stage, that as the bag had no provision for the escape of air it could be used in conjunction with the Gibbon catheter as a form of tidal or intermittent drainage. If the bag is partially filled with air before attaching the catheter, the following sequence

occurs: the first quarter of the bag (say 5 oz.) fills at a normal rate, but as filling proceeds the pressure in the bag increases and the rate of flow is slowed. As the rate of excretion gradually exceeds the rate of drainage a certain amount of urine is retained in the bladder: when the bag is emptied the retained urine drains completely (and at this stage in the cycle the bladder is empty) to be replaced by fresh urine. If this effect is not desired the bag may, of course, be used for free drainage by expelling all the air before the catheter is attached, and by the same method the cycle of intermittent drainage can be broken at any stage.

[I am very grateful to Mr. N. O. K. Gibbon, CH.M., F.R.C.S., F.R.C.S.E., for his encouragment and assistance in the compilation of this report; also to Dr. M. Damanski, M.D. I would also like to thank Mr. Lee and his staff at the Central Photographic Department of the University of Liverpool for supplying the photographs; and Miss A. Drinkwater, matron, for permission to publish this paper.]

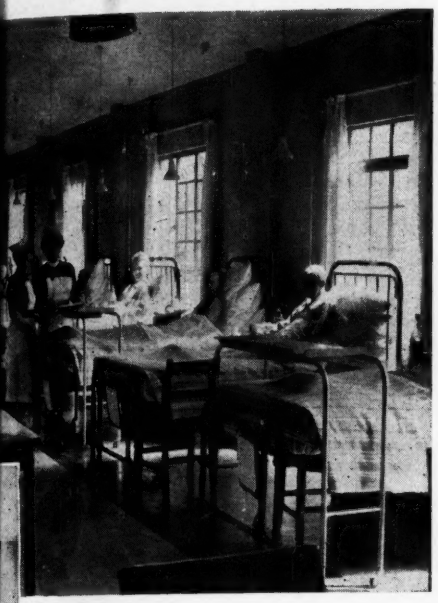
ST. MARTIN'S HOSP
BATH

ST. MARTIN'S HOSPITAL, BATH, is an acute general hospital with an important geriatric section. It offers a wide range of experience for the assistant nurse training school which has 50 pupils in training at present. Three preliminary training schools a year are admitted, and pupils remain in the PTS for six weeks. Some are non-resident and others share the nurses home (formerly the Spa Hotel) with nurses from other hospitals in the Bath group. There is a block of one week about every two months during the training. Successful pupils



In the men's surgical ward, sister discusses a patient's chart.

The theatre superintendent in the very up-to-date twin theatre unit recently opened. There is a dust-extraction plant and piped oxygen will shortly be installed.

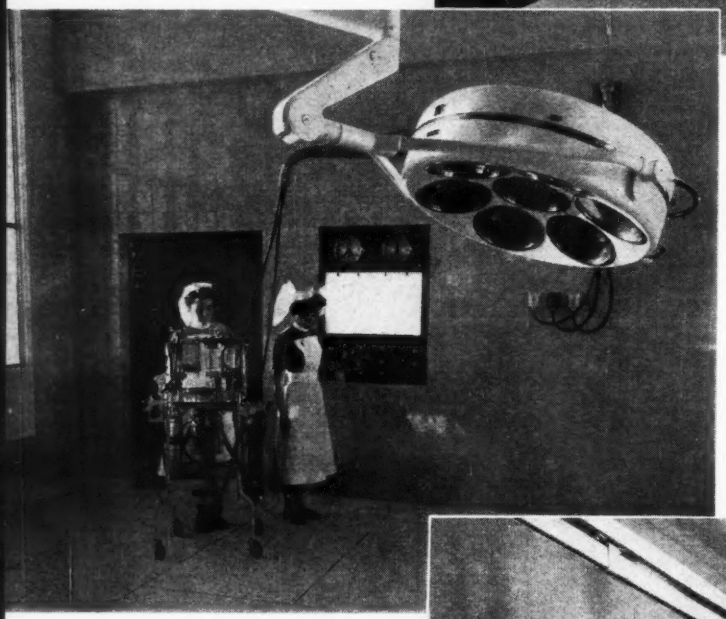
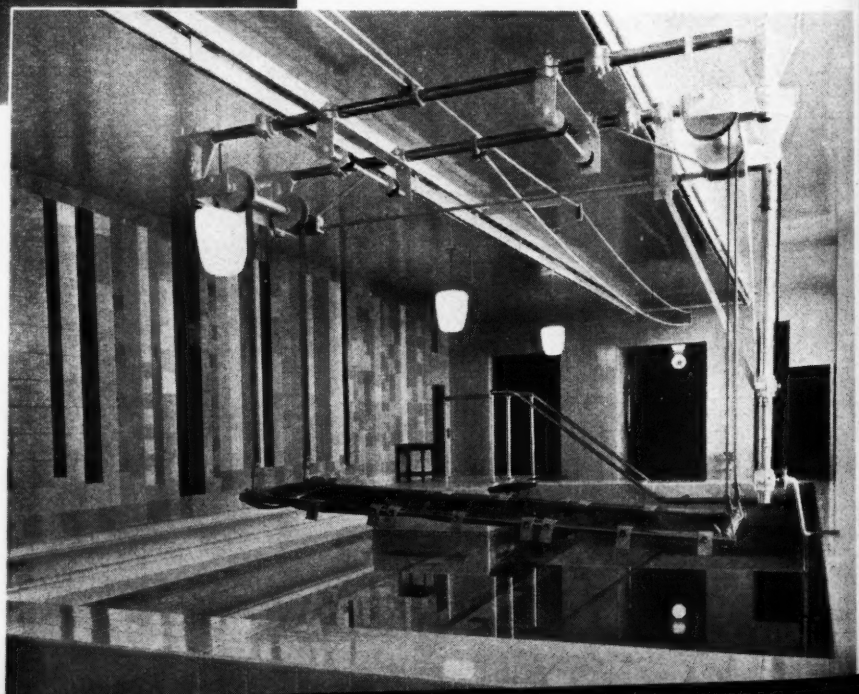
ALTNAGELVIN HOSPITAL,

LONDONDERRY, N. IRELAND

Officially Opened

THE FIRST large general hospital completed since 1939—at Altnagelvin, Londonderry—was officially opened on July 5 by Lord Wakehurst, Governor of Northern Ireland. The many interesting features of this beautiful hospital were described in the *Nursing Times* of April 15. Oxygen, nitrous oxide and vacuum service is extensively piped throughout the hospital, and conditioned air is supplied to maternity theatres, premature babies unit, the genito-urinary department and the four operating theatre suites (one of which is seen above). The beautiful hydrotherapy pool (right) in the eight-storey treatment wing has the water completely changed every four hours. The most unorthodox feature is that all service departments, kitchens, boiler rooms, etc., are in separate blocks, connected to the hospital by an underground service corridor. The new hospital is almost embarrassed by the number of student nurses wishing to train there. Already the nurses home is too small to accommodate all entrants.





ROYAL COLLEGE OF NURSING

The Bishop's Address

'To you it hath been granted in the behalf of Christ, not only to believe on Him, but also to suffer in His behalf, having the same conflict that ye saw in me'.
PHILIPPIANS, I. 29,30.

This is an abstract of the address given by the Rt. Rev. R. A. Reeves, Bishop of Johannesburg, at the service held at All Souls Church, Langham Place, during the Royal College of Nursing annual meetings.

TO THOSE who have been brought up to regard the Christian religion as something which will provide them with comfort these words of Paul's may well sound startling, if not quite shocking. Unfortunately so much soothing syrup is handed out in the name of Christianity that it is not surprising that many conclude that all that is required of Christians is that they should be nice people and live conventionally respectable lives.

The Privilege of Suffering

Yet even if we have another and different idea of the Christian religion, and even if we are learning something of all that pain and suffering means to human beings, we may find it puzzling to be told that we are given not only the privilege of believing in Christ, but also of suffering for His sake—yes, it is hard for us to accept the fact that the life to which Christ calls us is a life of blood, sweat, and tears: that the Christian life has always involved dying into life. To live as members in the Body of Christ, which is the Church, always involves being tested right up to the breaking point of human nature, calling not for some spectacular, heroic gesture, but for tough endurance up to the end. In short, to be one of God's family in this world means being willing to endure tensions and conflicts, for anyone who is trying to live out the Christian life.

The Bible at any rate knows nothing of all the verbal drugs that so often are handed out with the suggestion that the Christian life provides ease and comfort. On the contrary, the New Testament says very plainly that suffering is woven into the very stuff of life for Christians —Jesus calls us, not to a bed of roses, but to live under the Cross in the power of His Resurrection.

All this must have been in the mind of the apostle when he wrote the words with which we began to the Church in Philippi. Paul had grown old in the service of Our Lord in His church. Wise as he is, he knows about the strains and conflicts which beset Christians. He knows only too well that this Christian way of life involves suffering. From his great hymn of love in 1 Corinthians XIII we realize that none knew better than Paul that the truly Christian life is a life of love, but Paul also knew that in this world love has to be spelt out in suffering if it is genuine love.

This is not to say for one moment that we have not to do everything we can to relieve the sufferings of other people. Few more glorious pages have been written in humanity's long story than the record of the battle against disease and all needless suffering which human beings inflict on one another. My point is quite simply that anyone who desires to be Christian must be prepared to suffer.

I can give you no better example than that of the woman who came to anoint the feet of Christ. It was not only the alabaster box of perfume that was broken; her heart was also broken for the sake of love. Yes, any human being who is willing to try and love with the love of Christ has to be ready to suffer. All this has been put very truly by a modern Spanish philosopher when he said 'There is no true love save in suffering, and in this world we have to choose either love which is suffering, or happiness'—and the tragedy is that those who pursue happiness so very rarely find satisfaction, while those who accept love which is spelt out in suffering know joy which abides.

Once we reflect upon it, this is not as strange as it appears at first sight. Indeed if we study the gospel records we learn that the sufferings of Christ were the glory of His perfection. By them He overcame selfishness, evil, and death, and made it possible for us to rise above our selfishness to a new life lived in the love of God—and, as it was with Christ, so it became true in the experience of His followers: their sufferings were their glory, power, peace and joy.

Growth through Suffering

Those of us who are familiar with the Acts of the Apostles know that the world of their day found it quite impossible to cope with them. The world found it quite impossible to subdue men and women who turned humiliation into glory, who found joy through sorrow, who discovered laughter in tears, who grew in sympathy as their own sufferings increased, who found that they grew through sacrifice, and to whom, finally, death meant life. It is no wonder Jewish leaders said of them

that they had turned the world upside down. The reason was that these men and women took the very things ordinary people dread most—namely, humiliation, suffering, sorrow, and pain—and made them means of abundant life. In return for the worst the world could do to them they just went on loving more and more.

Heart of the Christian Religion

I have dwelt on this at some length because it is the very heart of the Christian religion and the secret of the persistence of the Church. If we miss this then we miss the whole meaning of the Christian way of life. The Bible and the Church unite in declaring that it is along the path of sacrifice alone that we can be purified from selfishness, and become so dominated by the love of God that His love becomes the mainspring of our words and actions.

Today this is what the world needs most from us. Beyond all our skill and ability, people need us and our love, our compassion, our sympathy. They need those around them who have the capacity to share their burdens with them, to stand where they stand, to see life through their eyes, but that is always a very costly thing to do. Yet it is only those who are prepared to pay the price that is demanded from them who find that joy and peace the world can neither give nor take away. It is so easy for us to be engaged in a great deal of activity, to serve on a number of committees, to busy ourselves with a multitude of good works. The extraordinary thing is that so often all this bustling activity achieves so little, and yet it is not so extraordinary because the world needs love and love is spelt out in suffering for others.

Yet in so speaking of suffering love we ought at a time like this to spare a thought for our fellow-workers in other lands, especially nurses in South Africa going through a time of great testing. There the ideology of *apartheid* has invaded the nursing profession. By the Nursing Act of 1957 all officials of the South African Nursing Council have to be white nurses elected only by white nurses. Although this has not yet been done, this Act empowers the Council to establish separate registers and different uniforms and badges for nurses belonging to different racial groups. Worse still, Section 49 of the Act lays down that any person who causes or permits any white nurse, midwife or student to be employed under the control of a non-white nurse is liable to a fine of £200.

To anyone who cares for the good name of the nursing profession such legislation seems to be a direct affront to all the best in the nursing tradition throughout the civilized world. More than that, it stands in direct contradiction to the statement in the International Code of Nursing Ethics adopted in 1953 which says 'Service to mankind is the primary function of nurses and the reason for the existence of the nursing profession. The need for the nursing service is universal. The professional nursing service is therefore unrestricted by considerations of nationality, race, creed, colour, politics or social status.'

I am persuaded it is impossible to reconcile what is now happening in South Africa with the ideals of the nursing profession embodied in a statement such as this—and many nurses in every racial group in South Africa believe so also. As you would expect this has brought a great deal of suffering to many nurses. Less than six months after the passing of the Act a Federation of South African Nurses was set up in order to provide an organization in which there would be no colour-bar, but you will appreciate that in a country where most hospitals are government hospitals such an attempt to struggle against legislation aimed at disrupting the nursing profession by reducing all the non-white nurses to an inferior status is extremely difficult to accomplish.

I have drawn your attention to what is now happening in South Africa because we have a responsibility to one another, as well as to those who are committed to our care.

The sad thing is, whether it be in our relationship to each other or to those we nurse, we frequently fail to live in love because we are afraid of its costliness. So often we try to find satisfaction in happiness, even though we know in our hearts it is love alone in which we can find true fulfilment. We shrink from pain, sorrow and suffering—but fail to realize that God never asks us to face the costly demands of love in our own strength. God has set us in His own family, the Church, in order that the power of the Holy Spirit may be in us, the Holy Spirit which is the life of the Church. We may be thankful that God never leaves us to struggle on as best we may. God in his mercy has called us into His own family in which the Holy Spirit abides, the Holy Spirit who is the giver of life. For that reason we can take courage, answer the call to love, and live in love, even when that love has in this present world to be spelt out in suffering.

The Bishop of Johannesburg, right, with Miss M. J. Smyth, the Rev. J. R. W. Stott, and Mrs. A. A. Woodman, after Divine Service at All Souls, Langham Place, on June 22.

BOOK REVIEW

Institutional Neurosis

DR. RUSSELL BARTON claims that institutional neurosis is a disease in its own right which occurs in institutions, whether mental hospitals or otherwise, for example prisoner-of-war camps, orphanages, prisons, sanatoria, displaced persons camps. He claims that 'a schizophrenic whose relations are prepared to look after him in his own home does not deteriorate or regress to the same extent as the schizophrenic in the mental hospital, particularly if he is kept in a large ward'. So we are not fulfilling the first requirement of a hospital: that it should do the patient no harm.

Russell Barton's 'Institutional Neurosis' is an outspoken book. How outspoken you can judge for yourself from the extracts printed in this review. Dr. Barton believes that 'institutional neurosis' is a condition found mainly, but not exclusively, in institutions such as mental hospitals; he believes that it is preventable, and not a necessary sequel of the patient's original illness. One of the factors in its causation, he believes, is 'bossiness of medical and nursing staff'.

Characteristics and Causes

The neurosis is characterized by apathy, lack of initiative, loss of interest, especially in things of an impersonal nature, submissiveness, apparent inability to make plans for the future, lack of individuality, and sometimes a characteristic posture and gait. The aetiology is uncertain. The probable causes of the illness are:

1. Loss of contact with the outside world.
2. Enforced idleness and loss of responsibility.
3. Bossiness of medical and nursing staff.
4. Loss of personal friends, possessions and personal effects.
5. Drugs.
6. Ward atmosphere.
7. Loss of prospects outside the institution.

'Institutional Neurosis.' Russell Barton, M.B., M.R.C.P., D.P.M. Wright, 8s. 6d.

On 'bossiness of medical and nusring staff', Dr. Barton has this to say:

There are probably more kind and friendly doctors and nurses than otherwise, but it is my impression that an authoritarian attitude is the rule rather than the exception. It is revealed in many ways, e.g., the use of the imperative mood in written orders: 'Patients will not pick the flowers', 'Nurses will report immediately . . .' Orders are often given in a dictatorial voice, such as 'Sit down', 'At once', 'When I tell you', 'How dare you', 'You know you mustn't...', 'I've told you before ...' Patients have been shouted at across a ward

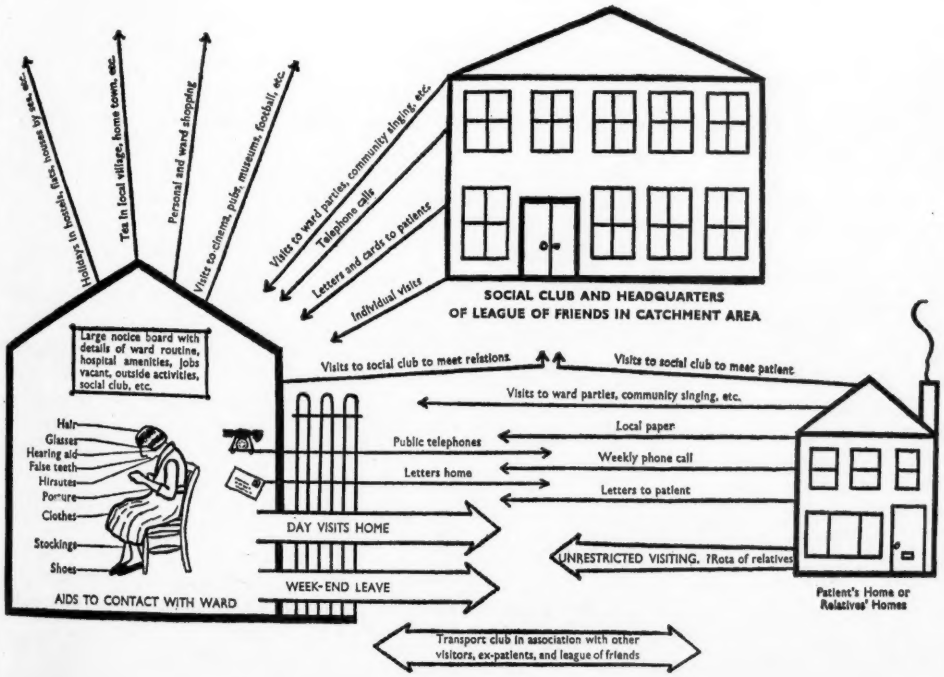


Fig. 1. *Chart showing arbitrary stages in rehabilitating patients with institutional neurosis.*

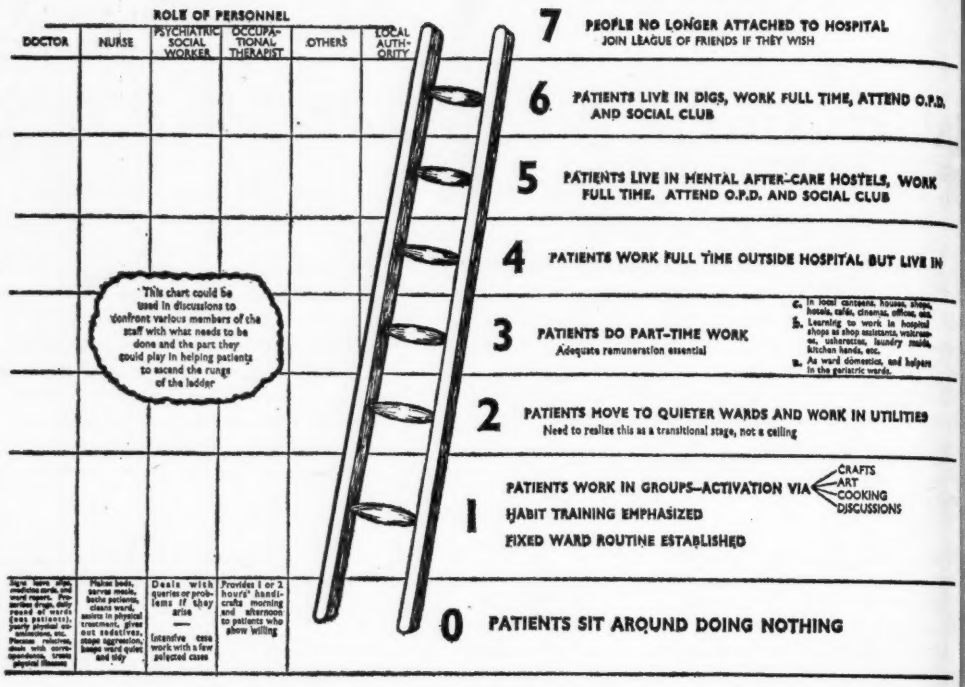

Fig. 2. *Treatment of institutional neurosis: contact with the outside world.*

[Illustrations are from 'Institutional Neurosis' by courtesy of the publishers.]

and sometimes grabbed by the arms or clothing and forced into a chair . . .

There is a tendency for sisters and nurses to decide which clothes, shoes, and aprons a patient must wear . . . If questioned, sisters often defend their decisions with 'The patient is too deteriorated to know', or 'The patient is too mad to know what she wants'. Instead of encouraging independence and nurturing initiative with the greatest care, the nurse is taking the patient out of her own life by doing everything and making all decisions for her. The nurse often has no option but to do so because of the way many mental hospitals have been run.

In many cases nobody has ever shown her how to treat patients properly and how to handle them without browbeating them. Until a year or so ago the know-how would not have helped her to pass the examinations necessary to get qualifications for the very job she was doing.

Approaches to Treatment

Treatment of institutional neurosis falls under seven headings.

1. Re-establish contacts with the family and community in every possible way.
2. Make patients active and gradually establish a sequence of events 14 hours a day, seven days a week, bearing in mind that regimentation and organization from above, necessary in the early stages of treatment, perpetuate the disease in the later stages.
3. Alter attitudes of doctors and nurses (if necessary). This cannot be done by giving orders and is not usually achieved by psychoanalysis.
4. Encourage friends, provide for possessions, and assist in bringing about personal events, i.e., the patient must be 'in the swim'.
5. Reduce drugs and distranquillize where possible.
6. Produce a friendly, homely, permissive ward atmosphere.
7. Make the patient aware of prospects of accommodation, work and friends outside hospital and assist him in realizing these prospects.

There is an interesting section on how the third point can be achieved, in which the hierarchic 'pecking order' of nursing, nursing examinations, and medical staffing are criticized in turn. Dr. Barton makes no claim that all mental hospitals are producing institutional neurosis in their patients, but even the progressive ones can learn from this book. Undoubtedly, those who are fortunate enough to work in the progressive hospitals will say it is overdrawn, exaggerated, or out of date. Those who have moved around a little in the mental hospital world will not say this.

Physical improvements of some sort or degree are becoming commonplace in mental hospitals. That is good, and Dr. Barton discusses the part they have to play. But he stresses most the importance of staff attitudes, and in this he is right. The responsibility of the nursing staff in a mental hospital is all the greater because of the utterly inadequate level of medical staffing that obtains throughout the service. This point is pressed with vigour by Dr. Noel Gordon Harris in his foreword.

But just as good work is sometimes done in tumbledown buildings, so shortage of staff is not the whole answer. Did Miss Nightingale have one nurse to every 2.5 acute surgical patients in the Crimea? How many extra nurses would a 1,000-bed hospital need in order to say 'please' to every patient three times a day, and to put 'Mr.' in front of his name?

B.V.W.

Here and There

UPTON HOSPITAL, Slough. Mr. Raymond Baxter of the BBC with prizewinners after he had presented awards at the prizegiving ceremony.

DN Course, Bath

A course leading to Part A of the Diploma in Nursing is again being offered by Bath Technical College if enough students apply for enrolment.

The course will last for two years, one evening a week, and lectures will be given in human physiology, chemistry, bacteriology, social psychology, preventive medicine and history of nursing.

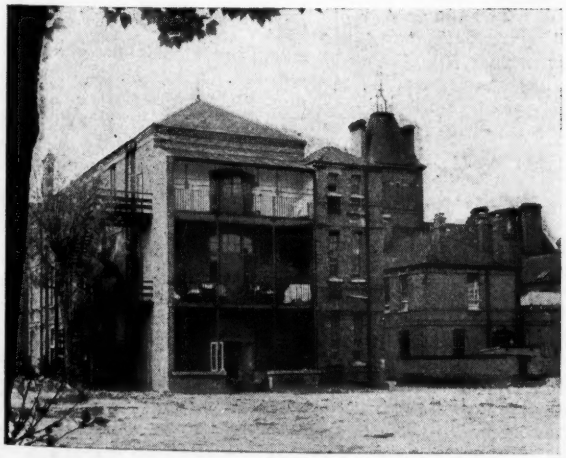
Prospective students must be registered general, mental, mental deficiency or sick children's nurses. Students are advised to obtain a copy of the regulations for the Diploma in Nursing from the University of London.

Fees will be £2 2s. a year; early application is advised (and in any case before August 27, 1960) to the Principal, Lower Borough Walls, Bath.

Oxfam Conference

A Freedom from Hunger Campaign sponsored by the UN Food and Agriculture Organization marks the beginning of a concerted attack on mankind's oldest enemy—starvation. The Oxford Committee for Famine Relief has arranged a conference at Lady Margaret Hall from July 30 to August 5 to focus attention on the closely related problems of hunger, disease and population growth. The speakers include Dr. Arnold Toynbee, Lord Boyd Orr, Sir John Russell, M. Veillet Lavalee, Dr. Boris Uvarov and Sir Oliver Franks. A very free programme is planned with plenty of opportunities for group discussion. 140 single rooms and 10 double rooms are available for immediate booking. Transport, vegetarian meals, entertainments and garages are available and the inclusive cost is £9 10s. or £6 for students. Further details from the conference secretary, Oxfam, PO Box 11, 17, Broad Street, Oxford.

▲ *Brigadier F. B. Cozens, QARANC, who has just succeeded Dame Monica Johnson as matron-in-chief and director of Army Nursing Services.*



◀ *Part of Fulham Hospital, London, which is to be demolished.*

Hospital Building Programme

'Our hospital programme is running well and at an accelerating speed, and its results will be increasingly seen in the completion of new building and the consequent well-being of the patients', stated the Minister of Health, Mr. Derek Walker-Smith, when he laid the foundation stone of the new Peterborough Memorial Hospital on May 24. The Minister also announced that the Ministry of Health Design Unit had been considerably expanded, and studies under active preparation included nurses homes, outpatient departments, and hospital kitchens.

Royal Wedding Souvenir for Sick Children

Some 50,000 copies of the approved souvenir programme of the wedding of Princess Margaret and Mr. Armstrong Jones in Westminster Abbey on May 6 will be distributed to hospital patients in Great Britain and Northern Ireland. They are the gift of the Council of the King George's Jubilee Trust, which published the programme.

World Mental Health Year

Some of the international projects planned for World Mental Health Year have had to be curtailed because of lack of funds. This is announced in the third newsletter and progress report issued by the World Federation for Mental Health.

On the other hand, numerous national projects in member countries have gone ahead to an exciting degree. Research projects are now under way in over 50 countries or territories. The United Kingdom has a large number of projects and activities in hand.

Letters to the Editor

CLINICAL INSTRUCTORS

MADAM.—I should like to say how much I agree with the views expressed by Miss Charleton (*Nursing Times*, June 24). I, too, have had experience both as ward sister and clinical instructor. It is sad to think there is so much misunderstanding about something which could, if carried out properly, help so greatly in giving better patient care.

The practical part of a nurse's training is greatly lacking at present. The guidance, supervision and teaching which a ward sister can give is not adequate and a planned programme of instruction impossible. This situation would not be sufficiently relieved by the addition of a ward clerk and teaching would be much more effective when carried out by a person trained for the job.

The clinical instructor has quite a different function from the ward sister so the case of too many cooks hardly applies. She has also a different function from the sister tutor in a ward, so that it cannot be said she is taking ward teaching from her.

The clinical instructor is working with individual nurses on the ward, instructing them, giving guidance and support when necessary and for as long as necessary. Knowing when to withdraw is as important as knowing when to give support. Nurses do want to learn and understand what they are doing. They welcome clinical instruction. So often at present they learn by their mistakes.

An important point was pin-pointed in the excellent article in the same issue 'The Potential Clinical Instructor'. There must be a genuine desire to have clinical instruction and give it fair trial. With co-operation and understanding between all who participate it can and will succeed and it is very necessary if we are to give the nurses the training they deserve and give the patients the skilled nursing which is their right.

MARGARET H. S. HUNTER,
Clinical Instructor.
Royal Hospital for Sick Children,
Glasgow.

Please keep letters as short as possible. Names and addresses must be given, even if not for publication. Address letters to The Editor, Nursing Times, Macmillan and Co. Ltd., St. Martin's Street, London, W.C.2.

GNC AND THE BMA

MADAM.—In attributing opposition to the General Nursing Council's policy by the British Medical Association and the Association of Hospital Management Committees to poor communications within hospitals (*Nursing Times*, June 24) you apparently imply that nursing officers are themselves wholeheartedly in favour of the new policy. Is there any evidence to support that assumption for it seems reasonable to suppose that, in hospitals destined to be adversely affected by it, the nursing officers must be having some difficulty in summoning the enthusiasm necessary to communicating an idea. The pride felt by the smaller hospitals in training students for State registration is probably greatest in the smallest hospitals, but above all is the anxiety as to whether nursing service will be maintainable under the new scheme.

This anxiety is shared by HMCs, and in their case I can speak from personal experience. Experience convinces me that there is a great need for some means, such as the public relations officer suggested in your leader of June 3, by which the GNC could communicate with HMCs more adequately than at present.

HMCs are genuinely and deeply alarmed by the new policy and my impression is that this is at least partly due to ignorance of the long-term policy of the GNC in which the assistant nurse is to play so large a part. It is unfortunate that so little has been done to publicize the emergence of assistant nurse training schools, in comparison with all the limelight shed upon the proposals to limit the number of training schools for State registration, giving rise to the fear that there will be no 'pairs of hands' to nurse the patients; a fear that may yet prove to be not altogether ill-founded.

It is paradoxical that while many HMCs envisage the GNC as a somewhat autocratic body, immersed in theory and quite regardless of the practical difficulties involved in complying with their regulations, it could hardly excel the Association of HMCs in intense pride in the standard of British nursing, its desire to maintain it and its affection for those who practise it. Thus the extension of assistant nursing implies to them an extension of the second best and no one is content to accept this for their patients. One spokesman who would appear to have read the RCN publication 'Aims and Objectives', foresaw a sad future in which the skilled nurse will sit in a nursing station remote from her patients while the bedside work is done by the semi-skilled.

It does therefore seem to me important to find out, if it is not already known, to what extent the nursing profession itself supports GNC policy for this is the first line of communication essential to putting across so revolutionary a measure. Not all nurses, alas, are College members and the last circulation figures for the *Nursing Times* that I heard did not suggest that we all take as much interest in our professional press as we should. Perhaps it is here that communications are at fault. Certainly the present controversy underlines the importance of keeping *au fait* with events by active membership of a professional association.

I will conclude by repeating my plea for a closer relationship not only between HMCs and the GNC but also between HMCs and the Royal College of Nursing. All three are devoted to promoting the best interests of the patient and it would help to dispel confusion among laymen as to the functions and identity of the two professional bodies.

ELIZABETH N. WARD.
Lincoln.

TEACHING AND LEARNING

MADAM.—The majority of nurses not only witness fortitude, patience, tolerance and endurance, but perforce have to exercise them under great provocation. A way has been found of putting a quart into a pint pot, the

outstanding example of which is describing a 50-hour week as 44.

Example is a greater teacher than precept. One deplores the vices of lying and cheating to the extent one has been taught the moral values and the necessity of upholding them, a procedure which includes ensuring their respect where we ourselves are concerned.

True education concerns itself with the encouragement of intellect and will. Instruction is part of all educating processes. But instruction, if it is divorced from education, can lead to making people merely useful, not educated.

Much of what passes for education nowadays has for its purpose to make people useful; useful to the bureaucrat, useful to the personnel manager; to the management committee, to the politician or whosoever can employ them for their own ends.

There must be, according to St. Thomas, 'peace based on order and justice which leads people to respect each other's rights. Justice gives to all sections of society the stability and efficiency which are necessary to successful living.'

The chance to live a full rich human life does not come to those who are used as a means to an end. If the nursing profession would have its 'share of Britain's girls' it must provide itself with some instrument for removing professional and social abuses. This duty devolves on every vocational group whether its members number 10 or 200.

A profession without an ethic cannot help but rot from within. It also depreciates those whom it embraces.

I. O'Dubjiolla.

London.

GNC EXAMINATIONS

Madam.—In a series of June final examination papers I was appalled to find the following phrases used by most of the candidates: 'The patient is Fowlerised; Fowlerise the patient; see to the patient's toiletings; the diet should be well trayed; the patient is ambulanced'.

These expressions may sound glib to some ears but I find them neither attractive nor accurate. The position originally called 'Fowler' has been so modified that the term is incorrect. 'Toileting' does not tell us what the nurse has done for her patient. The other phrases are not worthy of comment.

We discuss at length how we can raise the educational standard of the student nurse and then we find that she is taught by senior members of the profession to prostitute the English language.

Ann G. Notman.

Plymouth

SELECTION OF NURSES

Madam.—I found the article 'Selection of Nurses' made most interesting reading; in fact the writer was so naive that he became almost amusing. Speaking exclusively from the mental nursing field, in which I have been teaching for 10 years, I would say that Mr. Haward is preaching to the converted.

May I summarize some of the points made in the article.

1. 'Many tutors excuse their failures on the grounds of the original unsuitability of the applicant.'

I think my colleagues would agree that we have given a great deal of our time to improving the spelling and grammatical ability of our students, but there is a limit to what time permits. If students wishing to take a degree were allowed to enter the university, shall we say, without their GCE, and failed in their B.A. examination, would Mr. Haward blame the university tutors? What standard of entry to nursing would Mr. Haward lay down?

2. 'Children have to be educated even if they are mentally defective.'

Is Mr. Haward making an analogy of 'educating' mentally defective children with a profession where the trainees have human lives in their hands, or where personal relationships are vitally important—I sincerely hope not.

3. He asks us to seek help from the teaching colleges. I am sure that they would be most helpful, but I would remind Mr. Haward that we do spend two years at university level learning to teach, yes, and to teach the backward student.

4. I wholeheartedly agree with his opinions regarding reading ability.

5. I feel sure that Mr. Haward is lowering the standards in order to meet the needs of the applicant. The question remains as to what extent we can do this. If this is carried too far, it will act as a deterrent to well-educated applicants and, as I see it, it will be a sad day for British nursing as a whole.

R. Salisbury,
Principal Tutor.

Fulbourn.

[Mr. L. R. C. Haward's article 'Selection of Nurses' has also provoked a contribution from another reader (page 857).—Editor.]

ON OUR BEHALF

Madam.—I enclose copy of a letter I have written to the *News of the World*, which is self-explanatory. I really feel *someone* must do *something* about this type of advertising.

'I really must protest about your advertisement "The Florence Nightingale of the Brothels". I am not anti-brothel as such, I presume they are necessary, but to associate the name of this great and good woman with such a place is ungrateful and an insult of the most despicable type.

Do you realize that there are many half-educated people who have never heard of Florence Nightingale up to the present but now, having seen the advertisement, will probably associate her with brothels for ever more?

I am not a cranky old lady and not a member of the nursing profession but I am sure there are many people like myself who think that newspapers are going too far in their efforts to promote circulation. Please at least have the decency to keep your grubby fingers off really great people who have done nothing but good for their fellow men and women.'

C. A. Poole.

London.

GNC ELECTIONS

Madam.—Through the courtesy of your columns I should like to congratulate the nurses who were successful in the recent elections for the General Nursing Council and to thank all those who gave me their vote.

John Michael Andrews,
Nurse Tutor.

Woodford Green.

* * *

Madam.—May I, through your journal, express my appreciation to all the nurses who cast their vote for me in the recent General Nursing Council election, for mental nurse representatives. I would also take this opportunity to offer my congratulations to Mr. J. E. Soley and Mrs. E. C. Knowles, on their being elected to the GNC.

Robert G. Hogg.

Warlingham Park.

* * *

Madam.—May I through the medium of your journal thank all those who nominated me as a candidate for election to the General Nursing Council, and to give very grateful thanks to the many who voted for me, and to let them know that though not elected—this time—by their votes I was placed third in the South West Metropolitan Area.

Christine M. Massey.

London.

ROYAL COLLEGE OF NURSING

Branch Representatives Meet

LONDON, JUNE 1960

MISS M. J. SMYTH, president of the Royal College of Nursing, opened the Branches Standing Committee meeting on June 24 by saying how much she was looking forward to meeting and hearing the Branch delegates' deliberations, as for so long she had been 'on the other end'. Describing the BSC meetings as the most important meetings of the year, Miss Smyth said it was the means by which those working in different parts of the country had a direct link with headquarters.

Whether it was the stimulation of the president's address or the expectation of the extension of the membership, the June BSC proved to be the liveliest meeting that had been held for some time. Many questions were asked and an excellent rapport was manifested between the platform and the floor.

Once again, for the fifth year in succession, Miss Amy Holder, matron of Lodge Moor Hospital, was elected chairman. Miss Holder took her place after thanking the delegates for the honour they had accorded her.

Report of the Branches

In the Branches' report Mrs. J. C. Kilmister announced the formation of three new Sub-Branches in Scotland, bringing the total in the UK to 189; 139 Branches had submitted annual reports and the secretaries were thanked. Mrs. Kilmister gave an idea of the activities of some of the Branches, reported an increase in the number of annual rededication services on Florence Nightingale's birthday and spoke of the day conference of Branch honorary officers.

Area Organizers' Report

Miss L. M. Montgomery, as doyen of the area organizers, gave a report on their behalf. Miss Montgomery, on the eve of her retirement, made a plea for the eventual establishment of an office for each area organizer, with a clerk to help her work. She told of her visit with Miss Warren to Miss Hinda Herbert at Tindall Hospital, Aylesbury. At 94 Miss Herbert still took an interest in College affairs. A message of good wishes was sent to her.

Public Health Section

Miss Marion Knight said that a memorandum on the Problems of the Handicapped Schoolchild had been presented to Council (*Nursing Times*, May 27). A new working party was to meet in July to consider the subject matter of the conference to be held in Rome in 1961 organized by the International Conference of Social Work. Representatives of the Nursery Sub-committee had met Ministry officers in May to discuss the qualifications and responsibilities of day nursery matrons. A first meeting of the liaison committee between the Institute of Almoners, the Association of Psychiatric Social Workers and the Section had taken place in June. The College had been invited to form a joint working party with the College of General Practitioners to consider, in the first instance, the relationship of health visitors and family doctors.

Occupational Health Section

Miss Vera Stoves mentioned, amid applause, the decision of the Home Office with regard to the giving of morphia by nurses in factories (*Nursing Times*, June 17, 1960). The review of the latest scale of salaries of the National Dock Labour Board showed that the salary scales for all grades were much lower than those recommended by the College.

Private Nurses Section

Miss M. N. Copley told of a well-attended annual general meeting, a lecture on the modern treatment of malignant disease and a visit to the radiotherapy department of The Middlesex Hospital.

Sister Tutor Section

Miss Barbara Yule reported that tutors working in the mental field had been considering the needs of students taking part in secondment schemes.

Nurse Administrators Group

Miss Yule reported that the interim committee of the Nurse Administrators Group had taken office and that applications for membership were steadily coming into the College. Two Groups had already been formed, one in Swindon and one in the North Eastern Area. The Group was considering preparation for nursing administration, the qualities needed for administration, the position of the nursing administrator and the misuse of the administrator's ability. There would be an annual general meeting in 1961.

Ward and Departmental Sisters Section

Miss Barbara Turner reported that the Section's memorandum 'A Comprehensive Mental Nursing Service' had proved a great success and already 2,000 copies had been sold. A summer market was to be held on July 14 to help raise money to send two members of the Section to Melbourne next year. The standing orders for ward sisters were being revised.

Staff Nurses Group

Now in its second year, the Staff Nurses Group continued to grow slowly, reported Miss Turner. A new Group had been formed within the Leeds Branch and it was hoped to form another in Wales. It was hoped to produce a pamphlet for the newly qualified College member.

Student Nurses' Association

Miss Ione Spalding reported most successful summer meetings in Glasgow (*Nursing Times*, June 3). During April and May 1,423 new members had been enrolled; 189 members of the SNA had gone on to membership of the RCN.

Members of the RCN at the reception in the Cowdray Hall during the annual meetings.

Scottish Board

Miss Margaret Stewart welcomed and introduced the new assistant secretary of the Scottish Board, Miss McLaren, mentioned the three Scottish members in the Birthday Honours List (*Nursing Times*, June 17), thanked the past president, Miss M. J. Marriott, for her Scottish visit and announced that the Department of Health had promised the production of a booklet, suitable for the use of nurses, on the hazards of ionizing radiation.

The Scottish Board had had numerous requests for the clinical instructor's course; the second experimental course was just nearing completion.

Northern Ireland Committee

Miss Celia Russell was given great applause as she started her report. Members obviously had the Ulster hospitality of Founders Day celebrations in their minds. The education programme was now being planned; a ward sister's certificate course and a refresher course for ward sisters and psychiatric nurses were envisaged. Twenty health visitor students had now successfully completed their certificate examinations.

Education Department

Miss Mary Carpenter opened her report by thanking all hospital and other staffs who had made the visits of students both possible and enjoyable. She referred to Miss Bond, who for 20 years had been lecturer in physiology to the College, but was now retiring from full-time work. She would, however, continue her links with the College. Miss Carpenter made the first announcement of a new course to take place at the Birmingham Education Centre in the autumn: 'Back to Nursing' was to be a refresher course for registered nurses who had been out of nursing for some time, but who wished to return to the bedside. It was to be arranged in conjunction with the Birmingham Regional Hospital Board. (At this point the president expressed her particular pleasure at this move on the part of the Education Department.)

The College and Nursing Research

Miss Marjorie Simpson then addressed the meeting on the plans for nursing research being made by the College.

In reply to questions on Miss Simpson's report on nursing research during the afternoon session, it was stated that the College already had £500 earmarked for nursing research. The College had not yet started collecting money specifically for the Mountbatten Memorial Council.

Afternoon Session

At the afternoon session a question from Leeds bore immediate fruit at the end of the session. The delegate had asked whether it was necessary for the November BSC to be held on the day the State Finals were announced, as had happened for the last two years, as this was difficult for tutors, so it was decided to change the date already arranged for the November meeting. Tutors would then be able to congratulate their students *and* attend BSC.

Most of the questions were on administrative or organizational matters and the willingness with which points were conceded or promised consideration by the Council members and officers on the platform showed that BSC question time presents a golden opportunity to any Branch to raise these matters and to have something done about them.

An interesting discussion developed when the delegate from Southampton asked whether the *Nursing Times* could not publish statements by members of Council on matters of current controversy, so that the College electorate could be better informed of the views of the people they had elected to office.

The editor of the *Nursing Times* promptly responded with an offer to print any statement, on any subject, by any member of Council at any time.

Professional Association Department

The principal matters mentioned in the report of Miss C. M. Hall were as follows.

Whitley Council. After prolonged and difficult negotiations it had been agreed that qualified mental nurses in charge of one or more psychiatric units or wards should be graded as departmental sisters or departmental charge nurses, grade (*a*), (*b*) or (*c*), according to the number of registered nurses working under them.

It had been agreed also that in future there should be only one method of calculating rates of payment of part-time staff, and that the recent circular on the payment of part-time staff should only be operated in instances where it would benefit the member of staff concerned.

The College had submitted its views on a general review of salaries for nurses and midwives to the Staff Side.

The *Labour Relations Committee* had been studying the ILO report on nurses' conditions of work and employment. The College Council had decided to seek counsel's opinion in the dispute with Nottingham Corporation.

Indemnity insurance. Three cases were reported. In each case the insurance company had watched the interests of members, in two cases during court proceedings. The third case was settled out of court and the company paid, on behalf of the member, the sum of approximately £500, including solicitor's fees.

Superannuation regulations. As a result of representations to the Ministry of Health, a member had been granted an additional £32 a year pension and nearly £100 had been added to her retirement allowance.

Professional Association Committee. Letters received by the College, Miss Hall said, had once again emphasized the need for nurses to make arrangements through the National Council of Nurses before taking posts abroad.

There was concern over the position of missionary members who could not afford the College subscription. A number of Branches agreed to look into the possibility of adopting a missionary member.

Under 'matters of general interest', Miss Hall mentioned the generous response from Branches to the Edwina Mountbatten Trust appeal, which had been greatly appreciated by the trustees; also that it was hoped that the recent Branch officers' conference would become a regular event.

Miss Hall then referred in forthright terms to some of the comments made at the recent BMA Consultants and Specialists Conference about the GNC's proposals on the approval of hospitals as nurse training schools. The matter would be discussed in the BMA/RCN Liaison Committee.

The attention of the Council had been drawn to the difficulties of nurses when members of the National Federation of Spiritual Healers were admitted to wards. There seemed to be confusion in many people's minds between 'spiritual healing' and the 'divine healing' accepted by the Churches' Council of Healing. This topic was also down for discussion through the liaison committee with the BMA.

Total membership of the College, Miss Hall announced, was now 44,895; she drew attention to the fact that out of this membership, only just over 9,000 had cast votes in the election for Council. There had been 536 invalid votes.

A resolution from Epsom and District Branch 'that the Royal College of Nursing urge the appropriate authority that leave of absence be granted to public health members to attend professional meetings and to serve on hospital management committees' was passed unanimously, after a short discussion in which not one speaker opposed the motion.

In the Birthday Honours

Miss vivian mohai's work for lepers in Basutoland has been recognized by the award of the B.E.M. She was among the first group of African nurses to be trained at the Maseru Government Hospital where she also took midwifery training, qualifying in 1942. She was employed by the Basutoland Government as staff nurse in the Quthing District, and a year later transferred to the Maternity Hospital, Maseru, for a few months before joining the Botsabelo Leper Settlement where she served until 1955. On the transfer of the European matron to another post, Miss Mohai was appointed staff nurse-in-charge of the settlement and was promoted sister-in-charge in 1958.

GENERAL NURSING COUNCIL FOR ENGLAND AND WALES

At the June meeting of the General Nursing Council for England and Wales, presided over by Miss M. J. Smyth, chairman, Council considered *in camera* a recommendation for an outline syllabus in obstetric nursing and a guide to obstetric training drawn up by the educational supervisors of the Central Midwives Board in conjunction with the Council's education officer.

Miss E. B. Richardson, S.R.N., inspector of training schools to the Council, was appointed first assistant registrar from June 7.

Training School Rulings

Ministry of Health approval was received for the adoption or continuation of the following experimental training schemes already provisionally approved by Council. (i) *For a further five years*: the four-year scheme of training for the general and sick children's parts of the Register between Royal Liverpool Children's Hospital and David Lewis Northern Hospital, Liverpool. (ii) *For five years*: an 18 months' training scheme for the mental part of the Register at Powick Hospital, Worcester, for nurses already general trained. (iii) *For five years*: a 16 months' training for the mental part of the Register at Moorhaven Hospital, Ivybridge, Devon, for general-trained nurses who, during general training, have had two months' experience at the latter hospital.

The following changes were agreed but without prejudice to the position and rights of any student nurses already admitted for training.

Approval withdrawn. (i) Royal West Sussex Hospital, Chichester, as a complete general training school. (ii) St. Richard's Hospital, Chichester, as a complete general training school. (*Note*: provisional approval for two years was granted to these two hospitals to function together as one complete training school, to be known as the Chichester School of Nursing.) (iii) Thistle Hill Hospital, Knaresborough, to participate in a general training scheme for the secondment of student nurses from Harrogate General Hospital (the former continues to be approved for experience in the care of children for pupil assistant nurses within the group). (iv) St. Wulstan's Hospital, Malvern, to participate in a three-year general training scheme with Worcester Royal Infirmary, the United Birmingham Hospitals, Hereford County Hospital and Selly Oak Hospital (St. Wulstan's Hospital is shortly to be closed). (v) A three-year scheme of general training between Princess Elizabeth Orthopaedic Hospital, Exeter, and Bristol Royal Hospital (the former continues to be approved to participate in three-year general training schemes with other approved general training schools).

Approval extended for a further two years. (i) Bromsgrove General Hospital for complete general training with secondment to Kidderminster and District General Hospital for experience in the venereal diseases clinic and casualty department. (ii) Princess Elizabeth Orthopaedic Hospital, Exeter, to participate in a general training scheme with St. George's Hospital, London, University College Hospital, London, and the Royal Devon and Exeter Hospital, Exeter.

Pre-nursing Courses

The following courses were approved for the purpose of entry to Part 1 of the preliminary examination. (i) *Two-year whole-time*: Wymondham Secondary Modern Girls' School, Wymondham, Norfolk. (ii) *One-year whole-time*: Grantham College for Further Education.

Approval withdrawn. Chester College of Further Education, Chester (course now discontinued).

For Mental Nurses

Provisionally approved for a further five years. Graylingwell Hospital, Chichester, for an 18-month scheme of training for general-trained nurses for the mental part of the Register, the scheme in future to be based on the 1957 experimental syllabus.

Approved to conduct an 18-month training scheme in mental nursing, based on the experimental syllabus, for nurses already general trained: (i) Lancaster Moor Hospital, Lancaster; (ii) Old Manor Hospital, Salisbury.

Approval extended for a further two years. Cranage Hall Hospital, Holmes Chapel, Cheshire, and Mary Dandy Hospital, Great Warford, Alderley Edge, Cheshire, as training school for male and female nurses of mental defectives.

For Assistant Nurses

Miss L. Jones was elected chairman of the Assistant Nurses Committee (subject to her continuing in office as a member of Council after September 22, 1960).

The following changes were agreed, but without prejudice to the position and rights of any pupil assistant nurses already admitted for training.

Approval withdrawn. Cleveland Cottage Hospital, Saltburn, to participate in a scheme of training with Guisborough General Hospital, Guisborough.

Provisional approval extended for a further two years. (i) St. Alfege's Hospital (geriatric unit), London, S.E.10. (ii) Teignmouth Hospital with the City Hospital, Exeter. (iii) Andressey Hospital, Burton-on-Trent, with Outwoods Hospital, Burton-on-Trent.

Disciplinary and Penal Cases

The registrar was directed to remove from the Roll of Assistant Nurses the name of Margaret Whitaker, S.E.A.N. 56629.

Family Planning Association

The Family Planning Association held its annual meeting this year in Church House, Westminster. The president, Sir Russell Brain, told the delegates of the changes that had happened to public opinion since the association was formed 30 years ago. He felt that the changes had come about because reason had triumphed over ignorance and prejudice, and there was now a growing recognition of man's responsibility for control over himself.

He went on to say that he found it odd that those who opposed birth control on religious grounds, emphasizing man's spiritual nature, should in this context advocate that man should behave like an animal, and that sexual intercourse should serve solely the end of reproduction, because any alternative was said to be unnatural. It was man's nature to interfere with nature, and birth control had put into his hands the possibility of a great enrichment of life.

The Association's Medical Advisory Committee had considered the oral contraceptive which was to be tried at Birmingham, and had decided that it was perfectly safe for use in the way planned.

A member of the Association said that the biggest problem was getting family planning advice to those sections of the population which needed it most, and although some local authorities were willing to display lists of local clinics, others were not. Health visitors could be of great help with this problem.

◄ *SHAROE GREEN HOSPITAL, Fulwood, Preston. Centre, Miss E. Kelly, gold medal, with Miss I. Spalding, secretary of the Student Nurses' Association, who presented awards at the prizegiving. Left is Miss W. Hale, matron.*

Selection and Training of Nurses

Selection by character and the abolition of examinations is this reader's reply to Mr. Haward's article which we recently published.

IF MR. HAWARD* really wants a new approach to the selection and training of nurses, he must first step off on the right foot. Any person directly responsible for other people—be it in nursing or any other calling—must have dignity and status. To label people at the outset as either dull or bright is to deny them this elementary right and implies that their subsequent training will be determined by the label they wear.

It is proper that a nursing career should begin with a scheme of selection, and the pattern of this selection should be both fundamental and universal. The constitution of the body which is going to determine this pattern needs careful consideration, and our new approach must be comprehensive enough to permit the wind of change to permeate the highest and innermost corridors of the nursing edifice if necessary.

Selection by Character

What are our future nurses to be: integral components of a happy, efficient team, or mere automatons to work at a word of command? The former suggests that character, because it is fundamental to conduct, should figure prominently in our pattern of selection, together with temperament, adaptability and general education, among other things.

This selection test should take place at the end of the PTS and not at the beginning, since it would hardly be fair to estimate character in a single interview. A number of new and novel subjects could be incorporated into the PTS period designed to find the potential leader or future specialist nurse. A less comprehensive, preselection test may be held before the PTS to exclude obvious misfits.

After Selection

Those who pass the selection test proper are by implication fit persons to appear in hospital and have contact with sick people. They should therefore enjoy the title of 'nurse'. Those who fail the selection test should be helped to take up posts in the many homes and hostels where personal care and only a minimum of professional nursing is required. Such nurses could be lightly trained at their place of employment and carry the title 'assistant nurse'. SEANs would disappear. In this way we are taking the vexed problem of titles in our stride.

Training, after selection, should be spread over three years as at present. The accent should be on practical lines rather than academic—the conception held by some people that the nurse of the future should be college or university trained is ludicrous, fraught with difficulties, and should be vigorously opposed. It will increase rather than solve our present staffing problems.

Training should include a knowledge of fevers, other special diseases and a basic grounding of psychology which is just as important in general nursing as in mental nursing. Mental nursing would take in a little more general nursing than is the case at present.

No State Examinations

State examinations as we know them would disappear. Instead, the work and progress of a nurse would be assessed gradually over the whole period of training by all concerned in that training, and when an acceptable standard had been reached, names would automatically be forwarded for State registration.

By abolishing State examinations, the end of training would be seen as what it really is, a gateway to a professional nursing career and not an end in itself. The whole aim should be to produce a high output of good practical nurses.

This system does not imply a lowering of standards but rather a shifting of emphasis. Training would still continue after registration on a self-educating basis with help and encouragement from others as and when necessary. This further training would consist of widening experiences to reinforce book knowledge, ward administration and human relationships. Facilities should exist for suitable nurses to specialize and seek various diploma posts through voluntary examinations.

The best of the staff nurses would be appointed to assume control of the ward when sister was off duty with the title 'deputy sister' (a prestige rank which need not carry extra salary). We would now have the following grades of nurse: nurse, staff nurse, deputy sister, sister, assistant matron (nursing supervisor), matron (nursing administrator).

Male nurses should enjoy the same dignity, status and opportunity as their female colleagues. They have much to contribute to nursing. Once accepted as fit and proper persons to uphold the traditions and ethics of nursing, they should not be subjected to any prejudices whatsoever.

Mental nurses should not feel or be made to feel in any way inferior to their colleagues in the general field. Both fields call for character, ability and professional skill and pride of a high order. A slight differential in salary favouring the mental nurse should be maintained.

With a happy, efficient team spirit in mind, rank should exist without being apparent, if only because discipline should grow from within rather than be imposed from without. How do others see us? How in particular do our patients see us? To them, 'rank is but the guinea stamp'. They do not obviously differentiate between nursing sister, matron or doctor. The distinction they make is more likely to be between those who make them feel better and those who do not, those who help them and those who irritate them.

Vocation and Responsibility

Patience, long considered a virtue of the nursing profession, is only a virtue when it begins at the point where everybody else's is exhausted. Love and concern for our fellow human beings is second only to love of God, and only in so far as we acknowledge the fatherhood of God can we give any real significance to the brotherhood of man. The former gives us individual excellence and the latter gives us a real family spirit. In a world which daily gets more technical and more coldly practical there is still room for idealism and a sense of vocation.

Pay and hours of duty may well have a bearing on staff problems, but they are secondary to the frustration caused by lack of dignity and status. Nurses must experience and enjoy a sense of responsibility commensurate with the careful training they receive and the skill they acquire. Suspicion and mistrust between different grades must be eliminated. Personal jealousies and petty intrigues must go. Professional snobbery has no place in the ideal nursing team. All grades of nurses must feel they are somebody belonging to something. Their growth and stature should increase daily throughout their nursing career. The sick and suffering will sense these qualities in a good nurse and draw from them strength, comfort and hope.

A NURSE.

THE DUCHESS OF GLOUCESTER will open the Queen Mary Maternity Wing of West Middlesex Hospital, Isleworth, on July 13. The wing, which has more than 70 beds, was closed in February last year for renovations and modernization.

Author of 'Selection of Nurses: a New Approach', Nursing Times, June 24, 1960.

News from Northern Ireland

Progressive Patient Care in Ulster

A NEW KIND of hospital layout, based on a plan being operated in Cincinatti, USA, is being experimented with at the Mid-Ulster Hospital, Magherafelt. The hospital will be divided into three units, and patients will be placed in the units according to the gravity of their condition rather than the character of their complaint, moving from one unit to another as they improve. The plan is not expected to come into operation until March 1963 but £35,000 has been set aside for developing the scheme.

The progressive patient-care plan makes a complete break with tradition in that in the first phase there is no segregation of the sexes; the patients are still anaesthetized, and as soon as they are fully conscious they are transferred to the next stage in the unit. All acute cases, grouped at first within the immediate precincts of the theatres, will be under the supervision of a team of surgeons and specialists present at all times and equipped for any emergency that may arise in the immediately post-operative period. A great advantage claimed for the scheme is the concentration of skilled nursing staff where they are most needed, with less skilled and experienced staff to care for them in the convalescent stages.

Progressive patient-care units have not, as yet, been established in this country, although they are frequently met with in America. They are said to be economical of nursing staff, as the patients move while the nurses remain relatively static.

Another development at the Mid-Ulster Hospital, Magherafelt, is the provision of a separate unit for old people and those who are suffering from chronic conditions. This, too, is expected to be completed by 1963.

Successful Open Day

At the open day held at Forster Green Hospital, Belfast, the 200 guests were mostly drawn from among citizens not directly connected with the hospital and health services (too often this is not the case and open days are too much inclined to develop into occasions of preaching to the converted). The guest of honour was Mr. J. L. O. Andrews, Minister of Health and Local Government, whose father served in the past as chairman of the board of governors of the hospital.

Mr. W. McKinney, chairman of the N.I. Hospitals Authority, spoke of the changes that had taken place in the medical outlook at the hospital and the changing pattern of the treatment of tuberculosis. The hospital had now become one for general chest diseases with a unit for thoracic surgery and Mr. McKinney announced that it was to be developed into a general hospital linked with others in the area. Originally the hospital had 25 beds; now it has 206. The visitors saw the new operating theatres, new X-ray plant, new radio and call-bell installations and saw with much interest the routine work of the hospital proceeding in wards and departments.

Study Tour Abroad for Matron

Miss M. E. Dennison, matron of Holywell Hospital, Co. Antrim, has been awarded the Duchess of Northumberland scholarship of the British Commonwealth Nurses War Memorial Fund for 1960-61. She has been granted three months' leave in order to study methods of administration and techniques in hospitals abroad.

St. Peter's Hospital for Stone

◄ *Princess Alice with Miss Forsyth, matron.*

Guests take tea in the garden of St. Paul's Church, Covent Garden. ►

THE GROUNDS of St. Paul's Church in Covent Garden, London, were the scene of a garden party held to commemorate the centenary of St. Peter's Hospital for Stone. Princess Alice, Countess of Athlone, was the guest of honour, and the fact that her father, Prince Leopold, had opened the present building that is St. Peter's Hospital exactly 78 years ago to the day, June 29, 1882, must have added to her interest in the proceedings. She visited the wards named after her parents, Leopold and Helen Wards, and several members of the hospital's staff were presented to her, including Miss J. M. Forsyth, matron, and an outpatient nurse, Mr. W. Brown, who had been on the staff for 29 years. Later, Princess Alice unveiled a commemorative plaque in the hospital's entrance hall.

To mark the hospital's centenary, a book called *St. Peter's Hospital for Stone, 1860-1960* has been published by E. and S. Livingstone Ltd. It is an interesting account of the hospital's growth from a small unit opened (with money raised by public subscription and a large anonymous donation) at 42, St. Marylebone Street, via a larger establishment at 54, Berners Street, to the present building in Henrietta Street. Mention is made of the many famous medical men who have been members of the staff. A hand-bound copy of the book was presented by the editor, Mr. Clifford Morson, F.R.C.S., to Princess Alice.

The centenary celebrations include a party to be given by the Friends of the Hospital, and another garden party at which it is hoped the Minister of Health will be present.

N.B. A leaflet is available giving full details of these products.

WHEN THERE IS A CALL FOR

NUTRITIONAL SUPPLEMENTATION

For the extra needs of pregnancy A single supplement which supplies the vitamins and minerals needed in increased amounts during pregnancy and lactation is PREGNAVITE, known and found satisfactory by the profession for more than 20 years. The nutritional support given by this preparation has undoubtedly been one of the factors contributing to the improved health of pregnant and lactating women over this period.

PREGNAVITE

In states of debility All debilitated patients, whether recovering from illness or operation or suffering from prolonged ill-health, need nutritional support. BEMAX, with its high content of essential amino-acids, vitamins of the B complex and E, and minerals including iron, is invaluable. It is easily digested and can be taken by patients of all ages.

BEMAX

For the febrile patient, the sick child, the elderly patient Give VITAVEL SYRUP —a combination of vitamins A, B_1 C and D in an attractive orange flavoured glucose base. This water-miscible preparation is found readily acceptable by children and others who dislike fish-liver oils. It is invaluable for the febrile patient, the sick child and the elderly.

VITAVEL SYRUP

Total £13 2s.

E. F. INGLE

Secretary, Royal College of Nursing Appeal for the Nation's Fund for Nurses, 1a, Henrietta Place, Cavendish Square, London, W.1.

(ii) *Members' Special Gift Fund*

We are most grateful to the following knitters who have sent us gifts during the past three weeks: Miss M. Woodhead, Miss I. M. Buck, Miss M. M. Hilton, Mrs. A. L. Gustersson, Mrs. Osborne, Mrs. Townsend, Mrs. Rowley. We also acknowledge with many thanks a donation of 10s. from Miss M. A. John.

E. F. INGLE, Organizer.

Miss Montgomery's Presentation

AT THE END of the afternoon session of Branches Standing Committee on June 24, there was a pleasant ceremony when Miss Amy Holder, in her capacity as a northern area representative, presented Miss L. E. Montgomery, retiring northern area organizer, with a cheque for £200 from College members in the north as a token of their esteem.

Miss Montgomery has sent us the following letter.

MADAM.—Following the recent College meetings held in London, when so many generous expressions of appreciation, kindly thoughts and good wishes were showered upon me, I would like to send my best thanks to all the members who gave and sent messages to me.

Those who were present in the Cowdray Hall at the close of the Branches Standing Committee meeting will know how my breath was literally taken away when I opened the envelope and read the amount of the cheque presented to me by Miss Holder on behalf of the northern division, Council members, and members of the northern area Branches.

I thank you all for the gifts and good wishes. I would also like to thank the many members who, over the years, have given me much encouragement, co-operation and delightful hospitality.

I shall watch with a lively interest all developments of the College and, in particular, the progress of the northern area Branches, Sections and new Groups of Nurse Administrators, and Staff Nurses. While I have been area organizer, in this period of almost 25 years, the Branches have increased from 30 to 44 and two Sub-Branches.

I am sending Danny Boy's photograph to the editor. I hope there is room to publish it. He is sitting at the typewriter waiting for me to dictate a letter! I will have to find Danny Boy a new job!

LILIAS E. MONTGOMERY.

This is Danny Boy.

Scottish Hospital Nurses' Lawn Tennis Challenge Cup Competition, 1960

The final match is to take place at Astley Ainslie Hospital, Grange Loan, Edinburgh, 10, on Thursday, July 28, at 2 p.m.

Bedford and District Branch

On the evening of June 20 members of Bedford and District Branch enjoyed the hospitality of their president, the Hon. Mrs. T. Morgan-Grenville of Wootton House. Members were greeted on arrival at the entrance to the lovely 17th century house by their hostess and her husband,

Lt.-Col. T. Morgan-Grenville, and entertained to refreshments in the hall. A walk through the grounds and rose-garden was followed by a short business meeting at which the chairman expressed her regret at the loss to the Branch of Miss M. Cossey, deputy matron, Bedford General Hospital (South Wing).

BRITISH MEDICAL ASSOCIATION

Nurses Essay Competition 1961

The Council of the British Medical Association is prepared to consider the award of prizes for essays submitted in open competition by nurses in the following categories.

CATEGORY (I). Open to student nurses undergoing a course of training at a hospital. *'Long hours spent in Observing and Serving Sick People are the best means of Learning to be a Nurse'. Is there any practical alternative to this?*

CATEGORY (II). Open to State-registered nurses, within five years of registration, working in hospital. *The Patient's Point of View.*

CATEGORY (III). Open to State-registered nurses working outside hospital. *Discuss the Care of Patients following discharge from Hospital, including the Physical, Mental and Social Aspects of such Care.*

CATEGORY (IV). Open to all members of the nursing profession. *Discuss the Relative Merits of large Teaching Hospitals and smaller non-teaching Hospitals as Training Schools for Nurses.*

CATEGORY (V). Open to nurses with sole qualification of S.E.A.N., and to pupil assistant nurses. *A Patient I have Nursed.* (Real name, address, etc., not to be used.)

Certificates and prizes will be awarded in each category as follows: 20 gns. for the best essay; 10 gns. for the second best essay. The purpose of this competition is the promotion of systematic observation among nurses. In awarding the prizes, due regard will be given to evidence of personal experience. No essay that has previously appeared in the medical press or elsewhere will be considered eligible for a prize. Previous prizewinners may compete for a second award.

The essay should be typewritten, if possible, but a legibly written manuscript will receive equal consideration. It must be written in the English language, on one side of the paper only, must be unsigned, but have with it a detachable note containing the name, address and category of the candidate. Essays, of 2,000 to 5,000 words, must reach the secretary of the British Medical Association not later than December 31, 1960.

Entry forms are obtainable from the Secretary, British Medical Association, BMA House, Tavistock Square, London, W.C.1.

EDUCATION DEPARTMENT

Diploma in Nursing Part A: part-time course

A PART-TIME COURSE in preparation for Part A of the University of London Diploma in Nursing will be held at the Royal College of Nursing on Tuesday and Thursday evenings from 6 p.m. to 8 p.m. throughout the academic year September 1960 to June 1961. The syllabus of the Diploma in Nursing is designed for those nurses who are actively engaged in practical work in hospital or public health. Copies of the regulations, which include details of the syllabus of each subject, may be obtained direct from the Director of the Department of Extra-mural Studies, University of London, Senate House, London, W.C.1. Details of the course may be obtained from the director in the Education Department, RCN.

Registration: 6-7 p.m. on Thursday, September 15, at the Royal College of Nursing. Students may register in advance by post, by applying to the Director in the Education Department, Royal College of Nursing, Henrietta Place, Cavendish Square, W.1.

Fees are payable in advance and are not returnable. Members of the Royal College of Nursing of one year's standing, and members of organizations affiliated to the Royal College of Nursing, are entitled to a reduction, as shown below. The affiliated organizations are the Association of British Paediatric Nurses, the Society of Mental Nurses, and the Society of Registered Male Nurses Ltd.

LEEDS REGIONAL HOSPITAL BOARD

On behalf of the Management Committees, applications are invited for the following appointments, and should be sent together with details of age, qualifications, training, experience, and the names of two referees (or copies of two recent testimonials) to the Matron of the appropriate hospital (except where otherwise stated), from whom further details may be obtained. Salaries and conditions are in accordance with the appropriate National Agreements.

ASSISTANT MATRONS

CHAPEL ALLERTON HOSPITAL, Leeds, 7. This is a new appointment and offers a good opportunity for anyone wishing to obtain administrative experience. The administrative staff includes one other Assistant Matron. The hospital is a general hospital of 259 beds, which is likely to increase to 311 in the near future, and it is expected that it will shortly be recognised by the General Nursing Council as an Assistant Nurse Training School. Application forms may be obtained from J. Folkard, Secretary to the Committee, Administrative Offices, St. James's Hospital, Leeds, 9.

ST. MARY'S HOSPITAL, Leeds, 12 (Maternity—109 beds; Geriatric—107 beds). Part I Midwifery Training School. Candidates should be S.R.N. and S.C.M. and be specially interested in the administrative side of the hospital. A special qualification in midwifery will be an advantage, but is not essential. The post offers good possibilities for a person having just completed a housekeeping course, or a nurse wishing to progress in administration. Application forms and further enquiries may be obtained from J. Folkard, Secretary to the Committee, Administrative Offices, St. James's Hospital, Leeds, 9.

WESTERN GENERAL HOSPITAL, Anlaby Road, Hull (General—504 beds). The hospital which is a complete Training School for State Registration in general nursing, has a complement of 504 beds. A major scheme of development, involving re-building, will start in the near future. This is a new appointment, additional to existing establishment. Detailed applications with names of three referees should be sent to the Secretary.

REGISTERED NURSE TUTORS

CASTLE HILL HOSPITAL, Castle Road, Cottingham, E. Yorkshire (Infectious Diseases, Thoracic Surgery and Chest Diseases—422 beds). Sister Tutor (female) for Group Training School with S.R.N. and R.F.N. Certificates and possession of B.T.A. Certificate an advantage. Students and Post-registration Students taking fever, thoracic and T.A. Certificates are accepted for training. Excellent teaching facilities are available. Application forms may be obtained from Group Secretary, Hull (B) Hospital Management Committee, De la Pole Hospital, Willerby, Hull.

PINDERFIELDS GENERAL HOSPITAL, Wakefield (School of Nursing—594 beds). Qualified Tutor, male or female, to assist Principal Tutor. Post vacant through retirement. Excellent teaching facilities and equipment. Applications to Group Secretary, Wakefield 'B' Group H.M.C., at the hospital.

WESTERN GENERAL HOSPITAL, Anlaby Road, Hull (General—504 beds). Qualified. To assist Principal Tutor in General Training School. Post vacant now and offers good teaching facilities and experience. Applications to Matron with names of three referees.

ADMINISTRATIVE SISTERS

CLAYTON HOSPITAL, Northgate, Wakefield (General—203 beds). Busy acute hospital. Good experience available. Application forms from Group Secretary, 113 Northgate, Wakefield.

ST. JOHN'S HOSPITAL, Halifax (Geriatric—382 beds).

DEPARTMENTAL SISTERS

MALTON, NORTON AND DISTRICT HOSPITAL, Malton (27 beds).

NIGHT SISTERS

CLAYTON HOSPITAL, Northgate, Wakefield (General—203 beds). One of two with Night Superintendent in charge. Excellent general experience available. Resident or non-resident.

HARROGATE GENERAL HOSPITAL, Knaresborough Road, Harrogate (General and Maternity—253 beds). Working under Night Superintendent. Excellent general experience available. Candidates may be non-resident, or live in semi-detached house adjoining hospital grounds.

THE GENERAL HOSPITAL, Batley (General—99 beds). Junior Night Sister or Staff Nurse.

THE GENERAL HOSPITAL, Dewsbury (General—128 beds). Senior Night Sister Resident or non-resident.

WOODGATES MATERNITY HOME, North Ferriby, Near Hull, Yorkshire (24 beds). Delightfully situated on the outskirts of Hull. Senior Night Sister.

YORKSHIRE HOME, Cornwall Road, Harrogate (Chronic Sick—70 beds). This is a very pleasant and modern hospital. Forty-four hour week.

THEATRE SISTERS

BARTHOLOMEW HOSPITAL, Bartholomew Avenue, Goole (Surgical—44 beds). To take charge of busy Theatre. Non-resident.

CHAPEL ALLERTON HOSPITAL, Leeds, 7 (General—259 beds). Full-time. Resident or non-resident.

HARROGATE GENERAL HOSPITAL, Knaresborough Road, Harrogate (General and Maternity—253 beds). For night duty in busy department.

ROYAL HALIFAX INFIRMARY, Free School Lane, Halifax (Acute—305 beds).

SISTERS

Salaries and conditions are in accordance with the appropriate National Scales.

CORNWALL

In this western county of hills and valleys can be found some of the most picturesque scenery and coastline with the minimum of travel, most routes providing a frequent bus or rail service. Cornwall is famous for its mild climate and attractive beaches, which are within easy reach of every town and village. To those who decide to live and work in the County, excellent recreational facilities and interests exist, whether in the town, seaside resort, or in the more remote but very beautiful countryside.

The hospitals in Cornwall provide excellent training for student and pupil assistant nurses and offer a wide range of experience after qualification.

BARNCOOSE HOSPITAL, REDRUTH (132 beds)

The hospital, situated between Redruth and Camborne, within a short distance of the attractive and favourite north coast of Cornwall, is an acute and busy geriatric hospital affording excellent experience. It is the active treatment centre for geriatric patients of the West Cornwall Clinical Area, and a Training School for Assistant Nurses. This hospital has good new resident accommodation.

STAFF NURSE. Resident or non-resident.

BUDOCK HOSPITAL, FALMOUTH

This hospital is situated near Falmouth on the Cornish Riveria.

STAFF NURSES.

STATE ENROLLED ASSISTANT NURSES. Male and female.

FALMOUTH & DISTRICT HOSPITAL, FALMOUTH

Modern well-equipped hospital with attractive nurses' home in grounds, with sea view and within easy access to beaches. Falmouth is a good centre from which to explore many of the beauty spots of Cornwall and is also a reputable shopping centre.

SENIOR NIGHT SISTER. Resident or non-resident.

FALMOUTH HOSPITAL AND BARNCOOSE HOSPITAL NOW COMPRISING A COMPLETE ASSISTANT NURSE TRAINING SCHOOL

Busy general hospital and acute geriatric hospital offering excellent training experience for young ladies of 18 years or over. Resident Sister Tutor. Very good resident accommodation. Suitable applicants who have discontinued general training are considered for a shortened period of training.

PUPIL ASSISTANT NURSES.

HELSTON & DISTRICT HOSPITAL, HELSTON

Well-equipped cottage hospital built as a war memorial to the first World War, within easy reach of the coast. This is an acute hospital with a busy casualty department serving a wide area.

STAFF NURSE. Resident or non-resident. Applications to Matron, Falmouth and District Hospital, Falmouth.

NEWQUAY & DISTRICT HOSPITAL, NEWQUAY (22 beds)

Acute General Practitioner Hospital in well-known seaside town. Golf Course and sea within one mile.

STATE ENROLLED ASSISTANT NURSES.

POST GRADUATE COURSES

WESTERN HOSPITAL
SEAGRAVE ROAD, FULHAM, S.W.6

STAFF NURSES required, as Post-graduate Staff, for one year's training in infectious diseases and poliomyelitis (two certificates in one year).

Apply to Matron.

BELMONT HOSPITAL, BRIGHTON ROAD, SUTTON, SURREY (330 active beds. Special Neurosis Centre). Eighteen months' course in psychiatric nursing.

BROOKWOOD HOSPITAL, KNAPHILL, WOKING, SURREY. Applications are invited from male and female Registered Nurses to undertake a shortened course (18 months) in Mental Nursing. Courses commence in September, December and May.

CASSEL HOSPITAL FOR FUNCTIONAL NERVOUS DISORDERS, HAM COMMON, RICHMOND, SURREY (60 beds) (Family Centred Nursing). State Registered Nurses between the ages of 24 and 30 are invited to apply for a 12 month salaried course in Psychological Nursing of Neurosis, commencing in October. The Nurse will be a member of a clinical team and will be concerned with individual, family and community relationships inside and outside the hospital. She will gain experience in psychological aspects of child care and in methods of reporting, job placement and the use of social services. Discussions and visits will link the various aspects of the hospital's work with others concerned with mental health. There are good social and recreational facilities and opportunities for the nurse's particular interest. Apply Matron.

GRAYLINGWELL HOSPITAL, CHICHESTER, SUSSEX (Female—819 beds). S.R.N. Eighteen months approved course of Post-registration Psychiatric Training. Hospital pleasantly situated within easy reach of the sea and London. Candidates are welcome to visit the hospital. Particulars will be sent on request.

KINGSTON HOSPITAL, WOLVERTON AVENUE, KINGSTON-UPON-THAMES (500-600 beds). Courses of one year's duration in the following departments: Theatres, Casualty/Out-patients, Paediatrics. The Courses provide excellent experience. Staff Nurse's salary is given and a Hospital Certificate on completion of the course.

LONG GROVE HOSPITAL, EPSOM, SURREY (1,084 male beds: 1,067 female beds). **Course in Mental Health.** Shortened course in Psychiatric Nursing (18 months for State Registered Nurses). Forty-four hour week—no long day. Candidates may visit the hospital by appointment. Full particulars from Matron—females, or Chief Male Nurse—males.

MILFORD CHEST HOSPITAL, GODALMING, SURREY (330 beds). S.R.N. required for 12 months' training to qualify for the British Tuberculosis Association Certificate. Experience is gained in the nursing of patients with pulmonary tuberculosis and those who have had major thoracic surgery for tuberculous and non-tuberculous diseases.

ROFFEY PARK REHABILITATION CENTRE, HORSHAM, SUSSEX (117 beds). Training for S.R.N. or R.M.N. in psychiatric nursing. Certificate awarded on completion of six months course (44 hour week).

ROYAL EYE HOSPITAL, ST. GEORGE'S CIRCUS, S.E.1 (50 beds). For one year's ophthalmic training. Next vacancies for O.N.D., 1st September, 1960. Resident or non-resident.

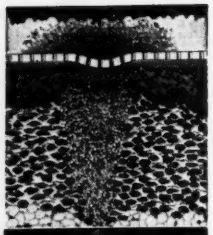
Nursing for Novices

WILLIAM EDWARDS, M.D.

A light hearted and extremely informative book which will be invaluable to all Nurses and Student Nurses.

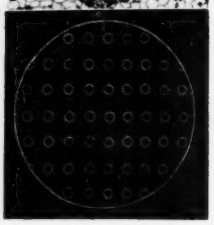
REPRINTED FROM THE NURSING TIMES.

ILLUSTRATED 5s. **MACMILLAN**



absorbent lint bonded to polyester film

low power section of a wound



microphotograph showing that holes in the film are exact and uniform

new, dry non-adherent dressing

Melolin keeps wounds dry, and promotes healing by primary intention. It protects wounds from trauma or infection. Melolin is effective on most types of wound, especially after surgery. It is clean and easy to handle, easily sterilised and economical. Granulation tissue can not grow into the film, and skin exudates are absorbed by the lint *through* the film. Melolin is made of a microporous polyester film bonded to absorbent lint B.P.C. It is non-adherent at all times.

Melolin is available in three sizes, 10 cms. x 10 cms., 10 cms. x 20 cms., 20 cms. x 30 cms.
